1. Introduction

ZimStat Approvals is the Agency's system for internal approvals and service requests. It replaces the paper forms for travelling and subsistence (T&S) advances and expense claims, applications for leave and annual leave (off days), and internal memos, and it adds a **service desk** for tickets, complaints and public data requests, reachable from the web portal and from WhatsApp.

This manual covers the whole product as deployed for the Zimbabwe National Statistics Agency. Screenshots were taken from the demonstration data; your names, sections and reference numbers will differ.

Who does what

Role	Typical person	Can do
Officer (Member)	Statistical officers, enumerators, clerks	Raise requests, act on approvals routed to them, handle service desk cases assigned to them, set out-of-office
Manager	Heads of section, supervisors / team leaders, accountant, internal auditor	Everything an officer can, plus act for their section: see the section's requests and cases, reassign cases, reports
Administrator	Director General, directors	Everything a manager can, plus design workflows, manage people and sections, categories and SLAs, settings, audit log
Owner	ICT systems administrator	Everything, including branding, API keys, WhatsApp and portal settings

How a request moves

A request starts as a **draft**, becomes **pending** when submitted, and visits each approval level in the order the form prescribes (for example Head of Section, then Finance, then the Director General). At every level the approver can approve, return it for changes, delegate it, or reject it. When the last level approves the request is **approved**. A return sends it back to the officer, or to an earlier level when the workflow says so.

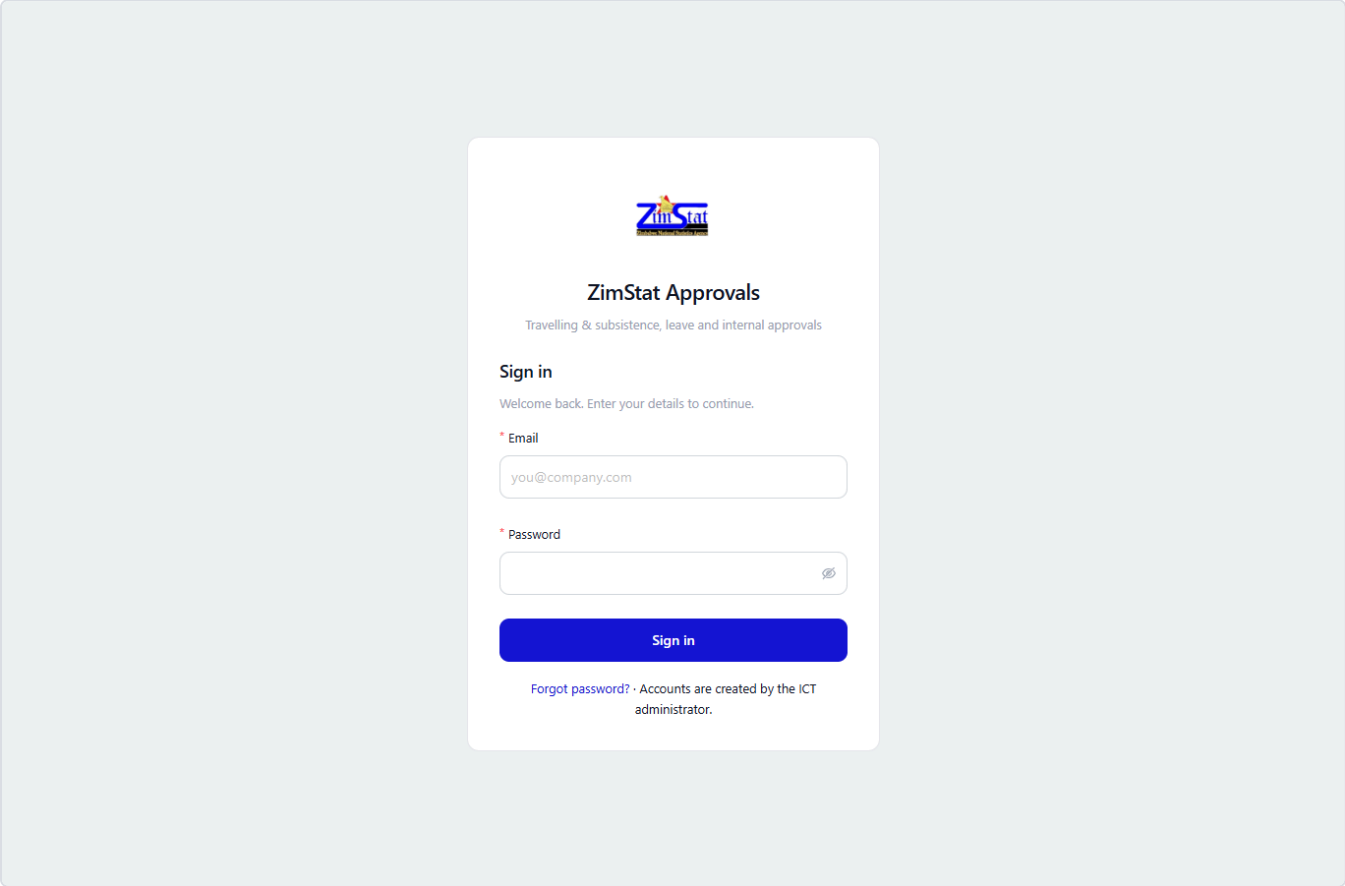

How a case moves

A service desk **case** (a ticket, complaint or data request) has its own lifecycle: new, triaged, assigned, in progress, on hold, resolved, closed, reopened, rejected. Cases are assigned automatically to the least-busy officer in the responsible section and carry a service target (SLA) in hours.

2. Getting started

Signing in

Open the system address and sign in with your Agency email and password. Accounts are created by the ICT administrator; there is no self-registration. If two-factor authentication is on for your account, a second screen asks for the 6-digit code from your authenticator app or a backup code.

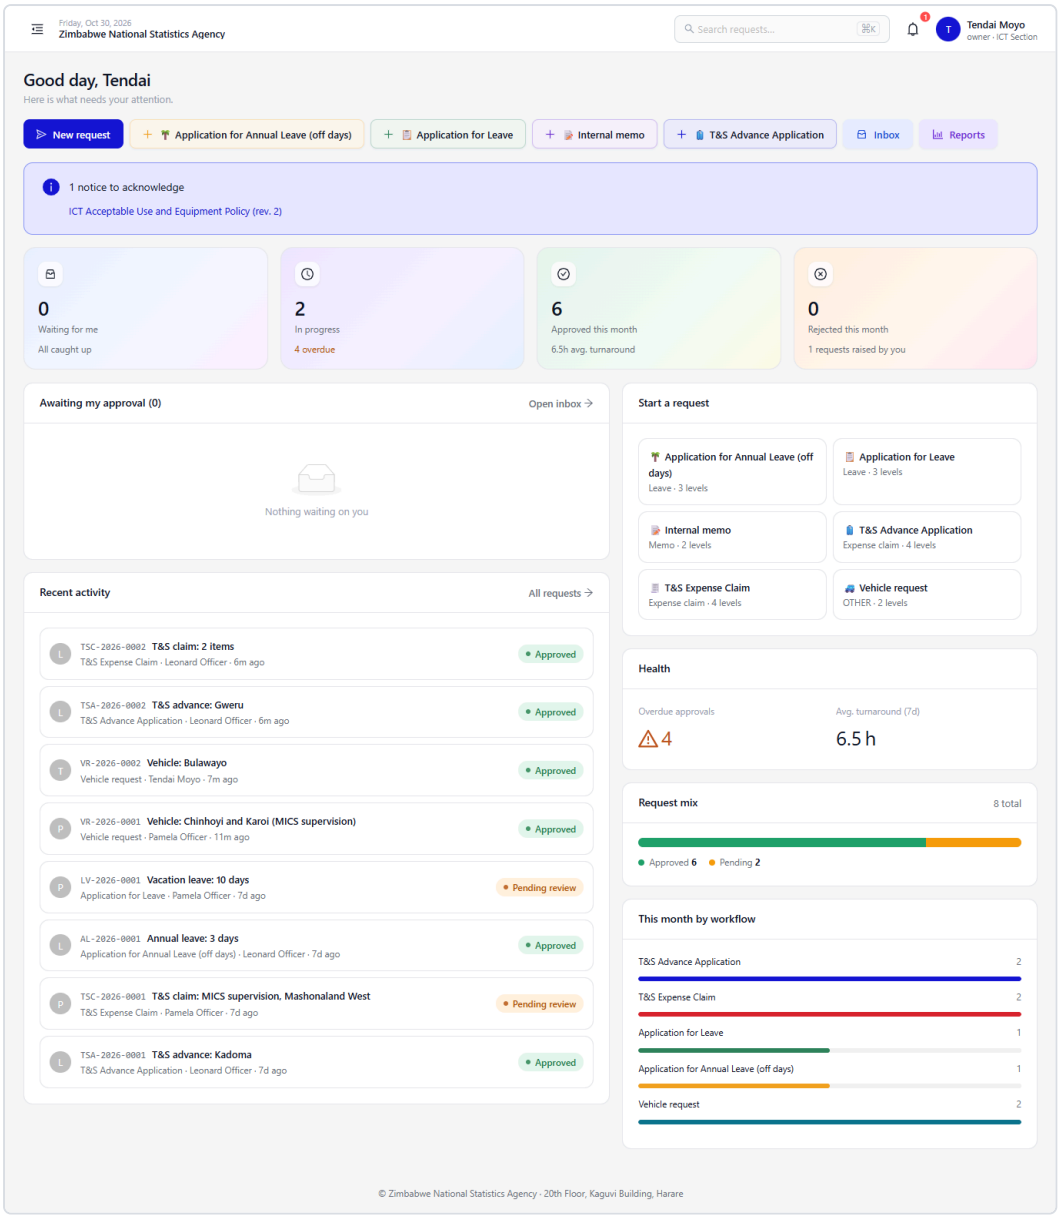

Sign-in page

Forgot your password? Click **Forgot password?**, enter your email and follow the link that is sent to you. The link works once and expires after one hour. After five wrong passwords the account is locked for 15 minutes; an administrator can unlock it sooner from People.

Passwords need at least 12 characters with upper and lower case letters and a number, and must not be a commonly used or previously breached password.

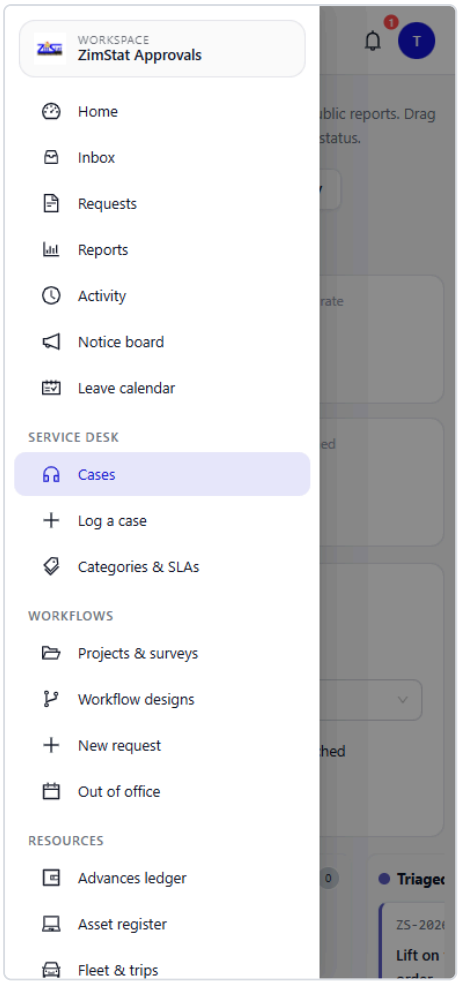

Finding your way around

The dashboard

- **Home** shows what is waiting on you, your open requests, recent activity and quick actions, plus notices you still have to acknowledge and any outstanding advance on your account.
- The **sidebar** is grouped: Work (Home, Inbox, Requests, Reports, Activity, Notice board, Leave calendar), **Service desk** (Cases, Log a case, Categories & SLAs), Workflows (Projects & surveys, Workflow designs, New request, Out of office), **Resources** (Advances ledger, Asset register, Fleet & trips) and Organisation (People, Sections & divisions, Audit log, Settings). What you see depends on your role.
- The red badge next to **Inbox** is the number of approvals waiting on you.
- **Search** (or Ctrl K) finds a request by reference, title or requester. The **bell** shows unread notifications. The **avatar menu** opens your profile, security settings and sign out.

On a phone the sidebar collapses into a menu button. Tables scroll sideways and forms stack into one column; approving from the inbox works the same way.

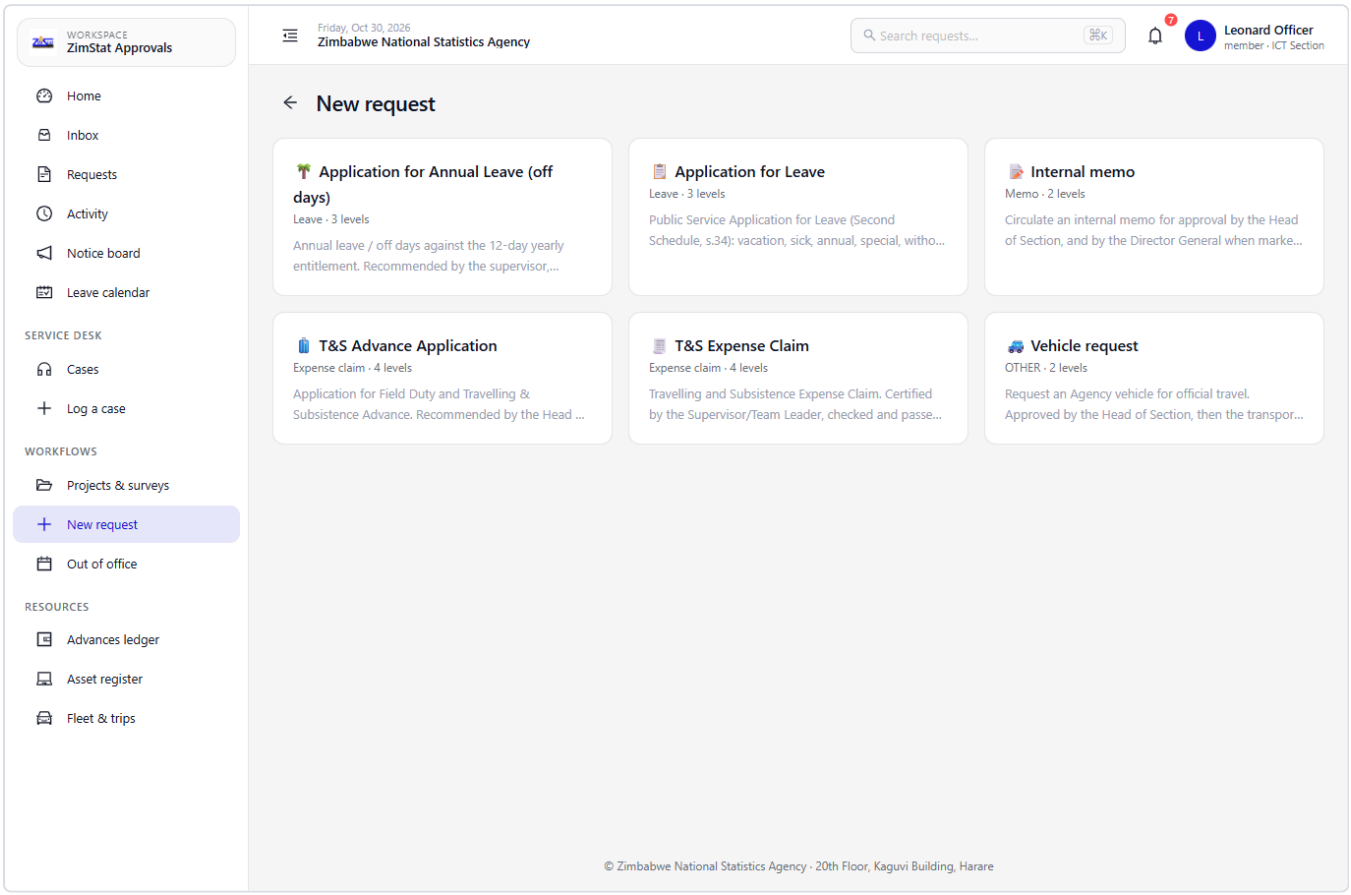

Mobile navigation

3. Raising a request

Step 1: choose a form

Click **New request**. Pick the form that matches what you need; each card shows the approval route it will follow.

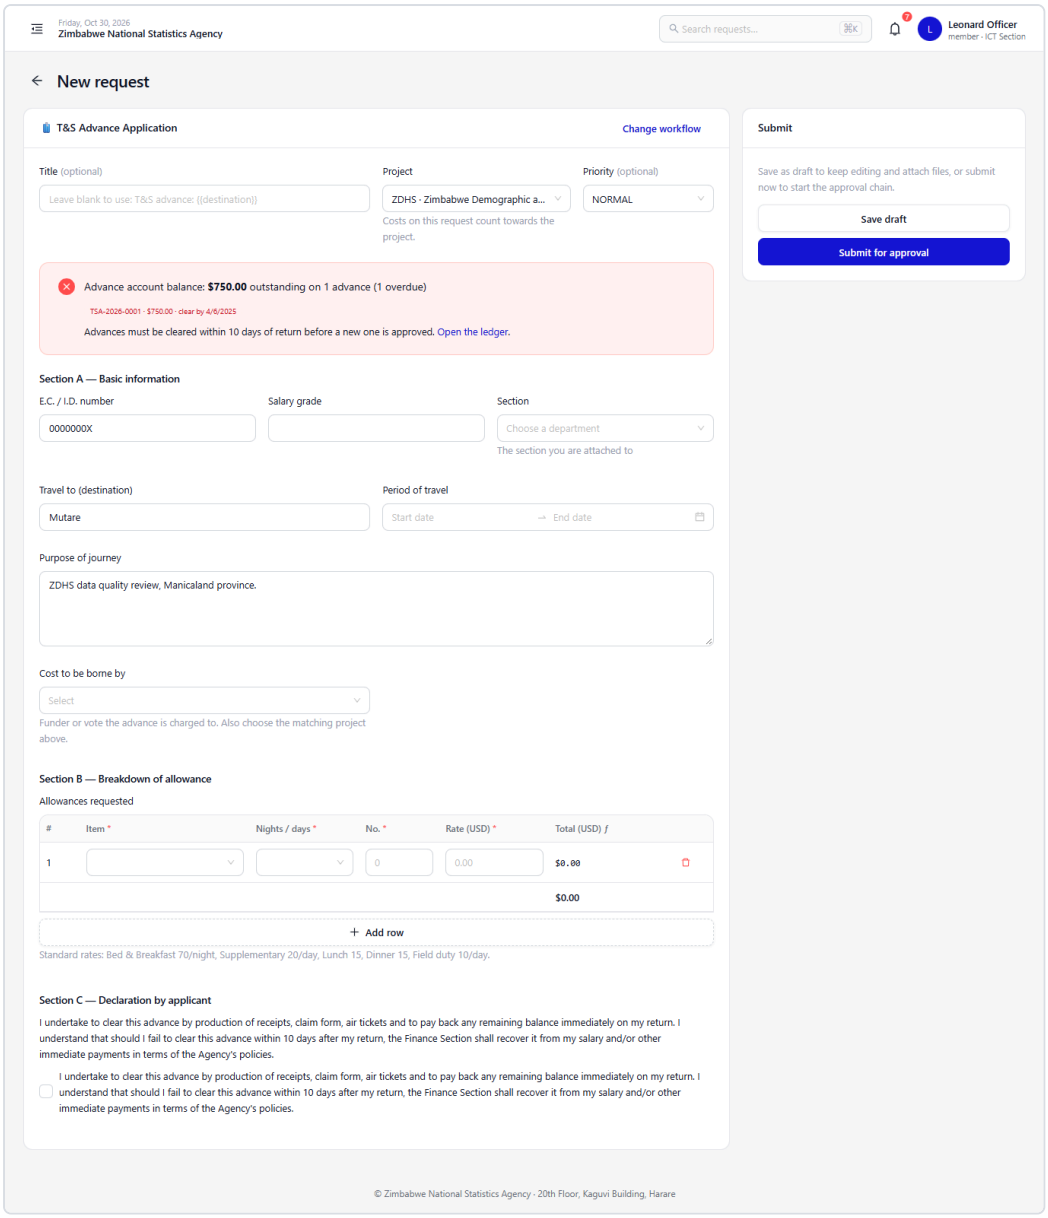

Choosing a form

Form	Prefix	Route
T&S Advance Application	TSA	Head of Section (recommend) → Finance Section (certify advance account) → Director General or Director Finance (approve) → Finance (disburse)
T&S Expense Claim	TSC	Supervisor / Team Leader (certify) → Accounts (checked, not previously paid) → Accountant or Director Finance (pass for payment) → Internal Audit (examine)
Application for Leave	LV	Supervisor (recommend) → Head of Section (approve) → Registry / HR (record and file)
Application for Annual Leave (off days)	AL	Supervisor (recommend) → Head of Office (approve) → Registry / Admin (record)
Internal memo	MEMO	Head of Section, then the Director General when marked for the Directorate

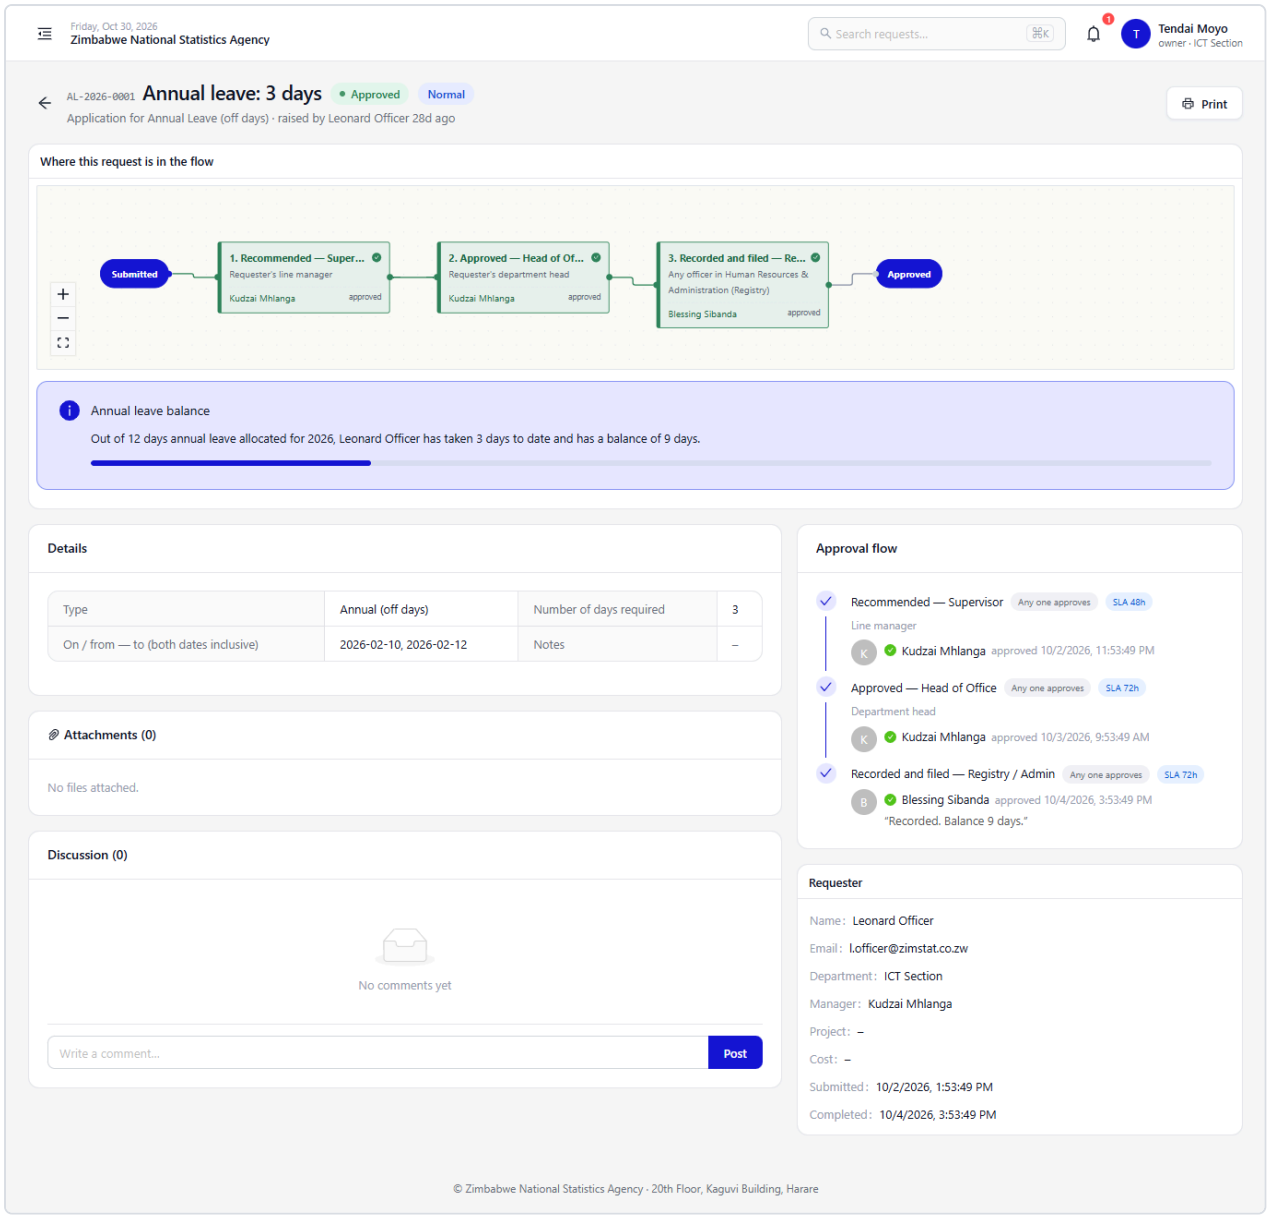

Step 2: fill in the form

The form mirrors the paper version. Fields marked with a red asterisk are required.

T&S advance application

- **Project / survey**: T&S advances and claims must be charged to a project (for example ZDHS, MICS or Treasury operations) so costs roll up per survey and funder.
- **Tables**: the allowance breakdown and the daily itinerary are line-item tables. Click **Add row**, fill the cells, and totals calculate automatically.
- **Declarations**: the undertakings printed on the paper forms (clearing an advance within 10 days, certifying a claim is true) are mandatory tick boxes.
- **Attachments**: receipts, tickets and medical certificates are attached to the request and travel with it through every level. Expense claims require at least one attachment.
- On leave applications the **annual leave balance** panel shows days allocated, taken, pending and remaining, and warns when a request exceeds the balance.

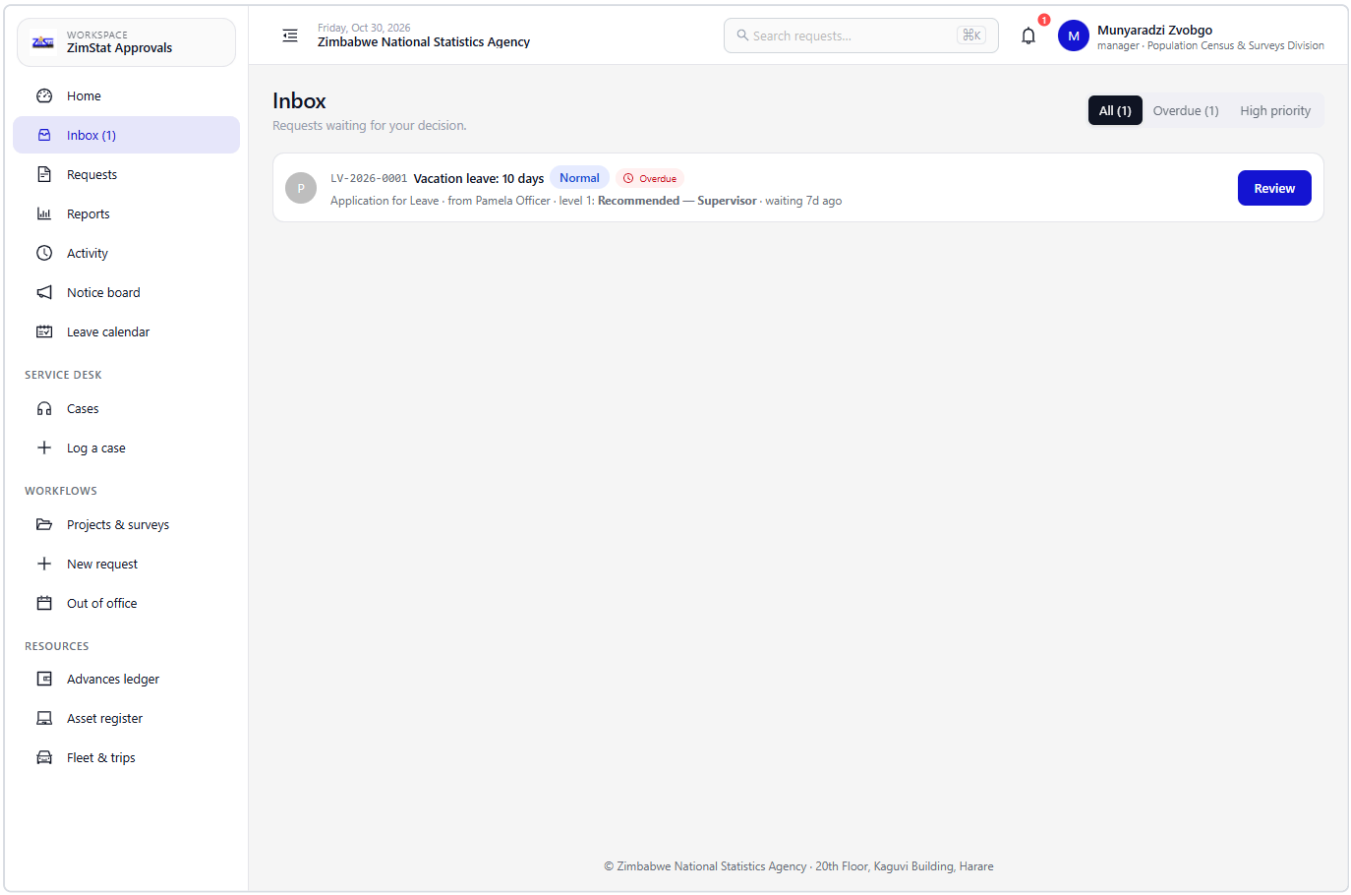

Leave balance on a leave request

Step 3: save or submit

Save as draft keeps the request private to you. **Submit** starts the route: the request gets a reference (for example TSA-2026-0001), the first approver is notified, and the form is locked unless it is returned to you. A returned request reappears under Requests with an amber Returned pill and the approver's comment; edit and **Resubmit**. You can **withdraw** a pending request from its page.

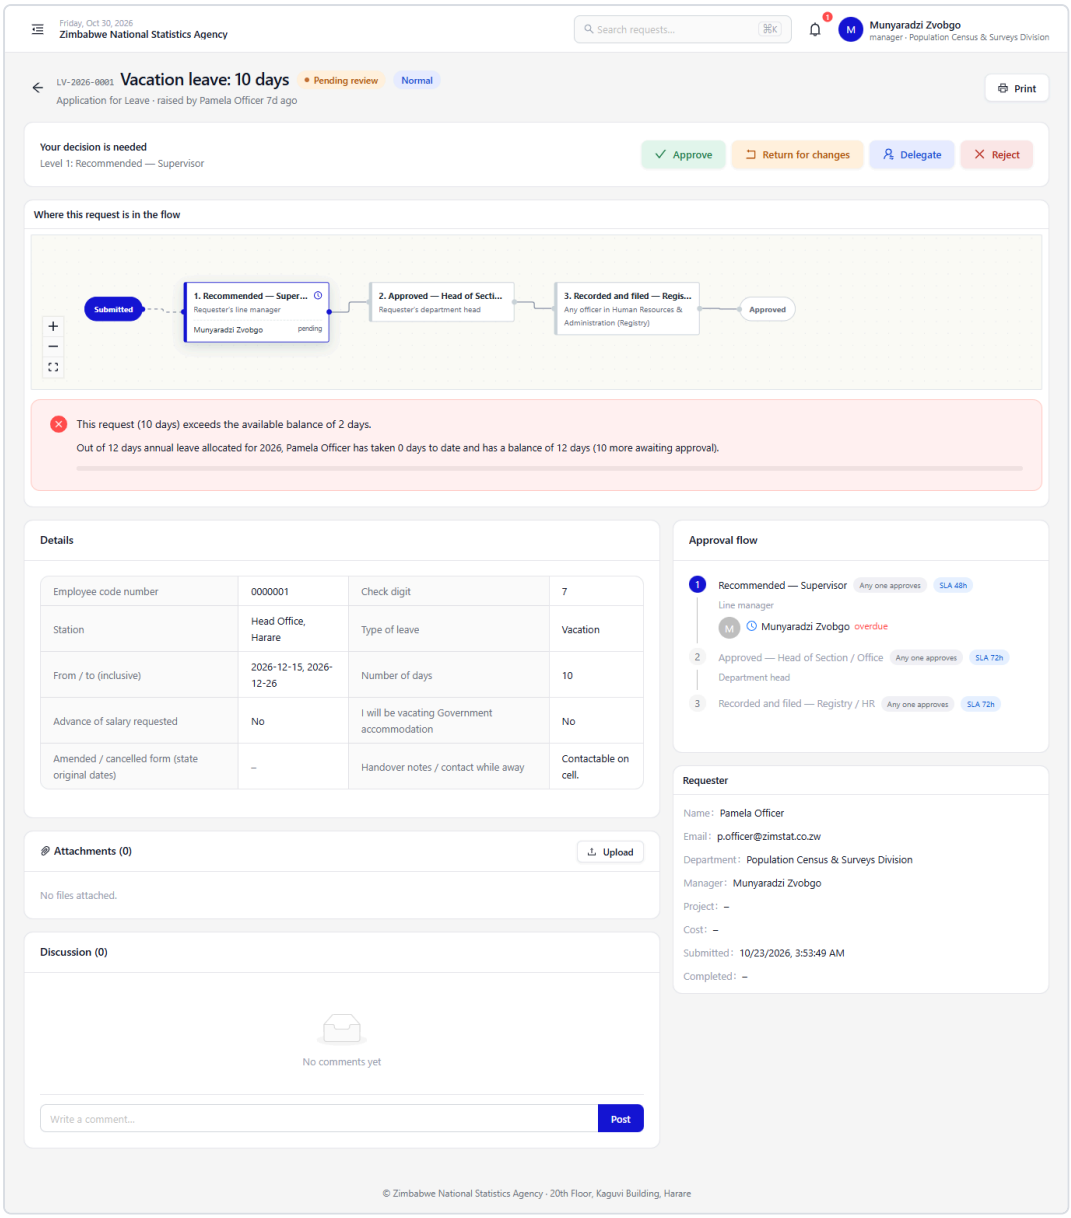

4. Approving

Everything waiting on your decision is in **Inbox**: reference, title, requester, form, amount, how long it has waited and the level you are acting at. Overdue items are flagged in red.

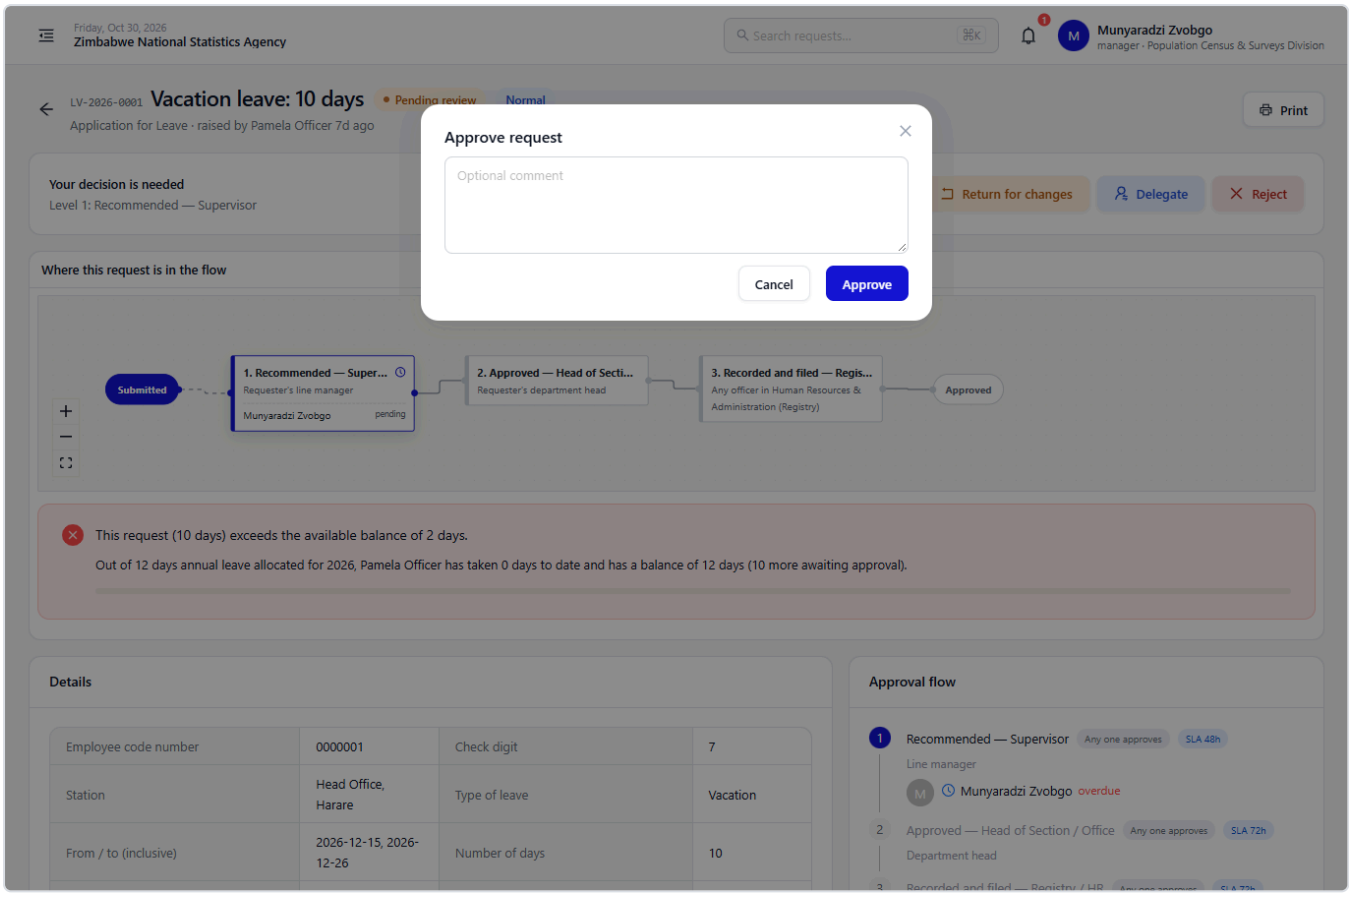

The inbox

You are in someone's inbox when the current level names you, names your role, names your section (any officer in the section may act, for example Finance Section certification or Registry filing), or asks for the requester's supervisor or section head and that is you. Items delegated to you while a colleague is out of office are marked **On behalf of**.

A request awaiting a decision

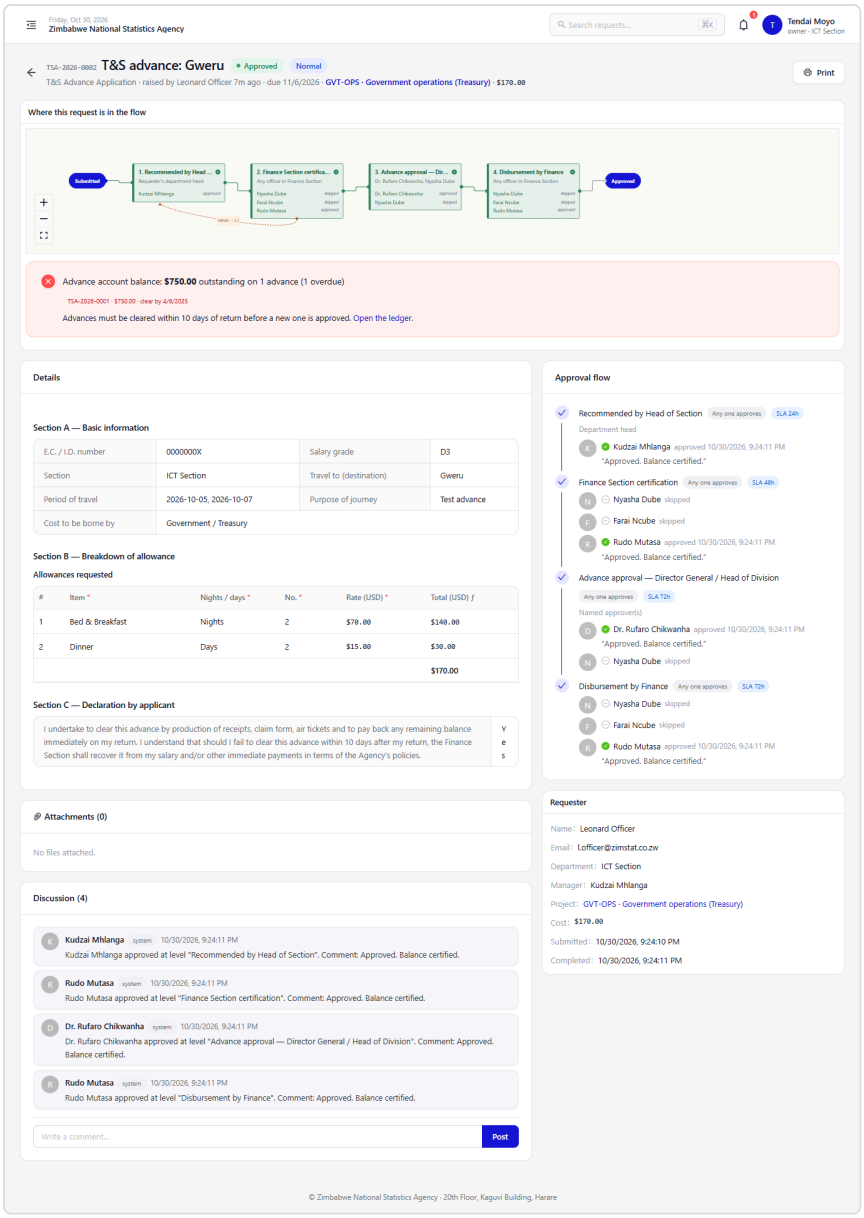

The request page shows the route diagram (green done, highlighted current, grey to come), the details as submitted, attachments, the timeline of every action, and comments.

Confirming an approval

Action	What happens
Approve	Your decision is recorded; the request moves to the next level, or becomes Approved after the last one
Reject	The request ends as Rejected; a reason is required
Return for changes	Goes back to the officer, or to the earlier level the form prescribes (for example Finance returns a T&S advance to the Head of Section); when resubmitted it comes back through you
Delegate	Hand this one decision to a named colleague

Some levels require a comment, for example Finance must state the officer's advance account balance when certifying a T&S advance. Decisions are final and are written to the audit log with your name, time and IP address.

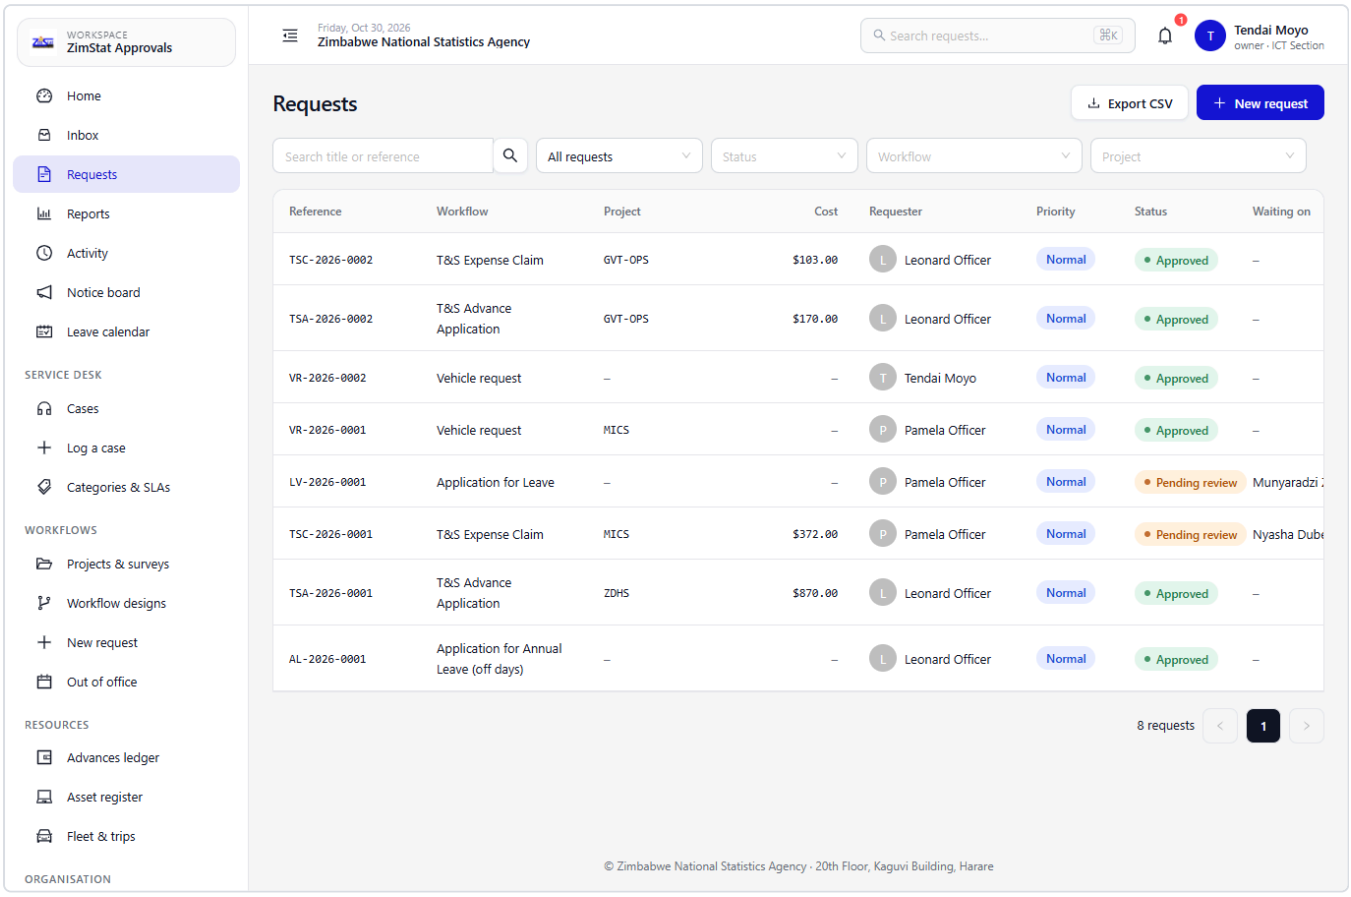

An approved T&S advance

Escalation

Each level carries a service target in hours. When exceeded the approver is reminded, the item turns red, and the request is escalated to the person configured for that level. Nothing is approved automatically.

5. Tracking requests

Requests lists what you raised; managers see their section and administrators the whole Agency. Filter by status, form, project, requester, section or date; search by reference or title; export to CSV.

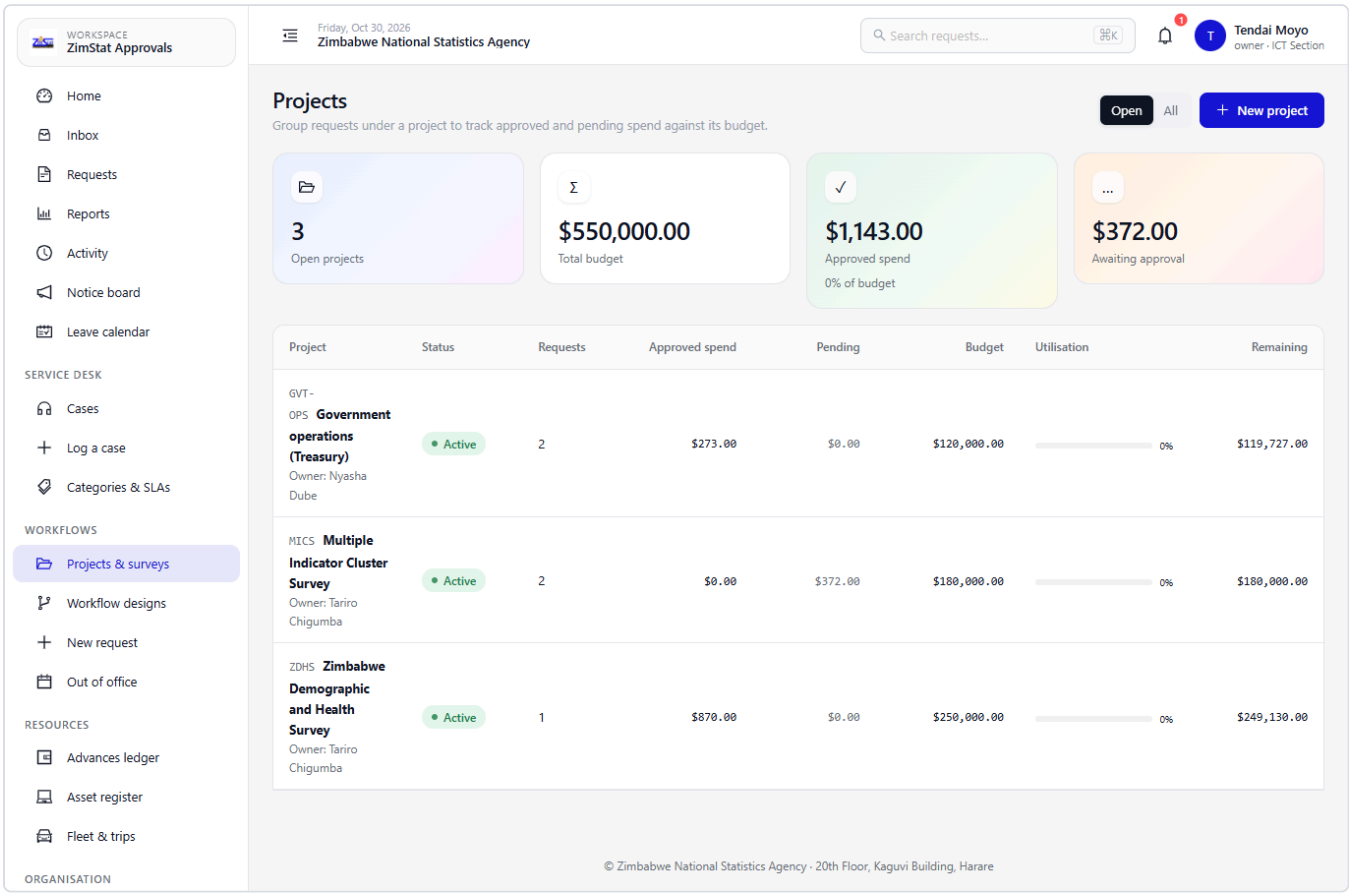

The requests list

Pill	Meaning
Draft	Saved, not submitted, visible only to you
Pending	In the route; the column shows the level it is waiting at
Returned	Sent back for changes; action is needed from the officer
Approved	Every level has approved
Rejected	An approver declined it
Withdrawn	The officer cancelled it

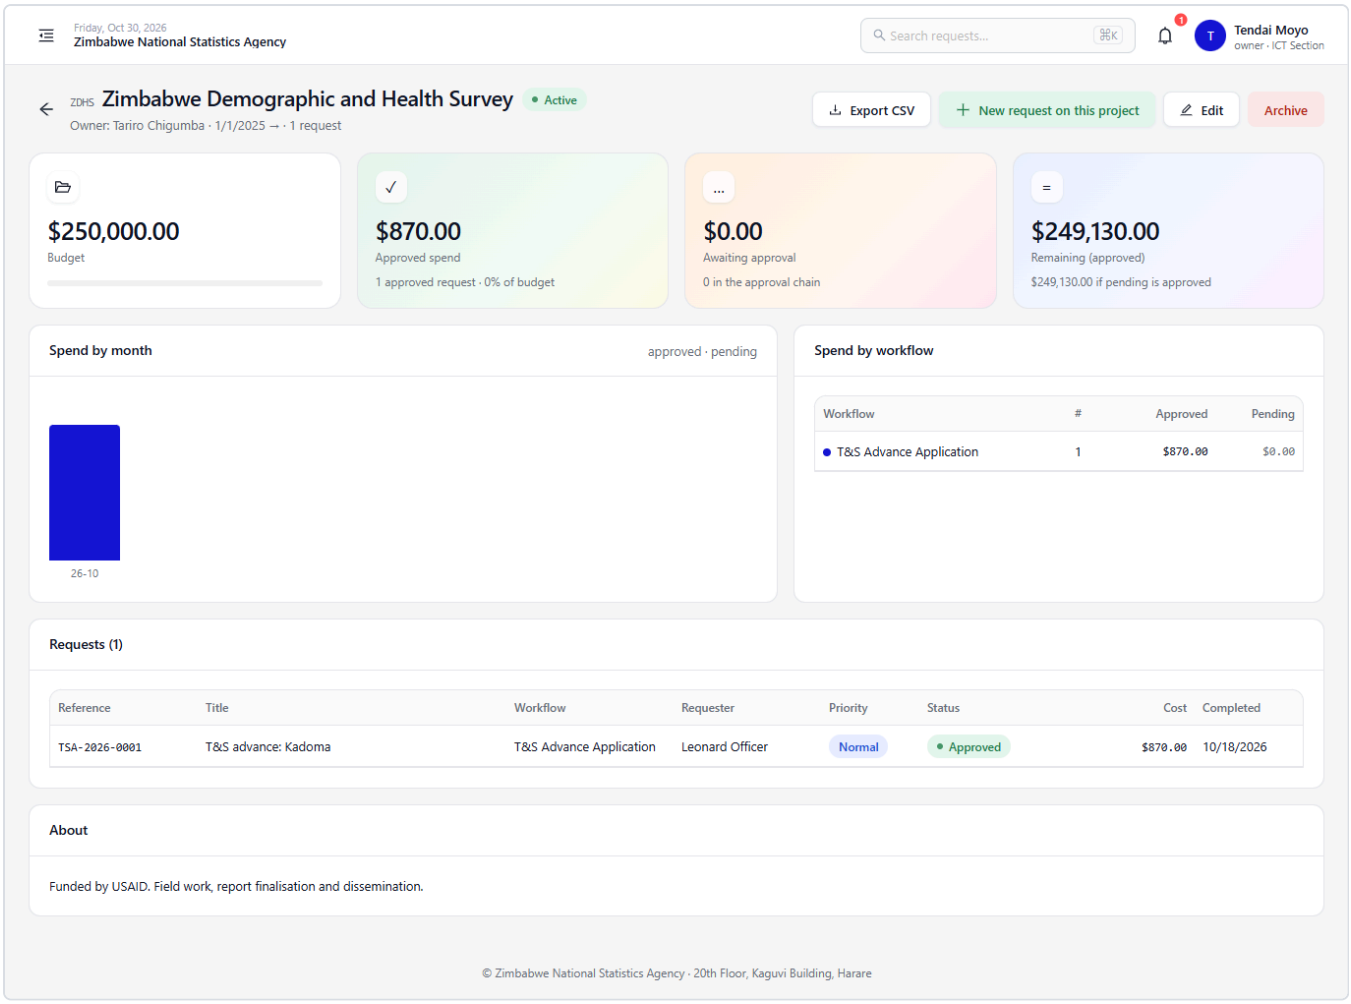

6. Projects and surveys

Projects group requests and cases from any form and show what they cost together: a survey (ZDHS, MICS, census), a funder or a cost centre.

Projects and surveys

Administrators create a project with a code, name, budget, owner and dates. Officers pick the project on the form; the request's cost (the allowance total of an advance, the itinerary total of a claim) is counted against it once approved. The project page shows approved and pending spend, spend by month, by form, the linked requests, and a CSV export.

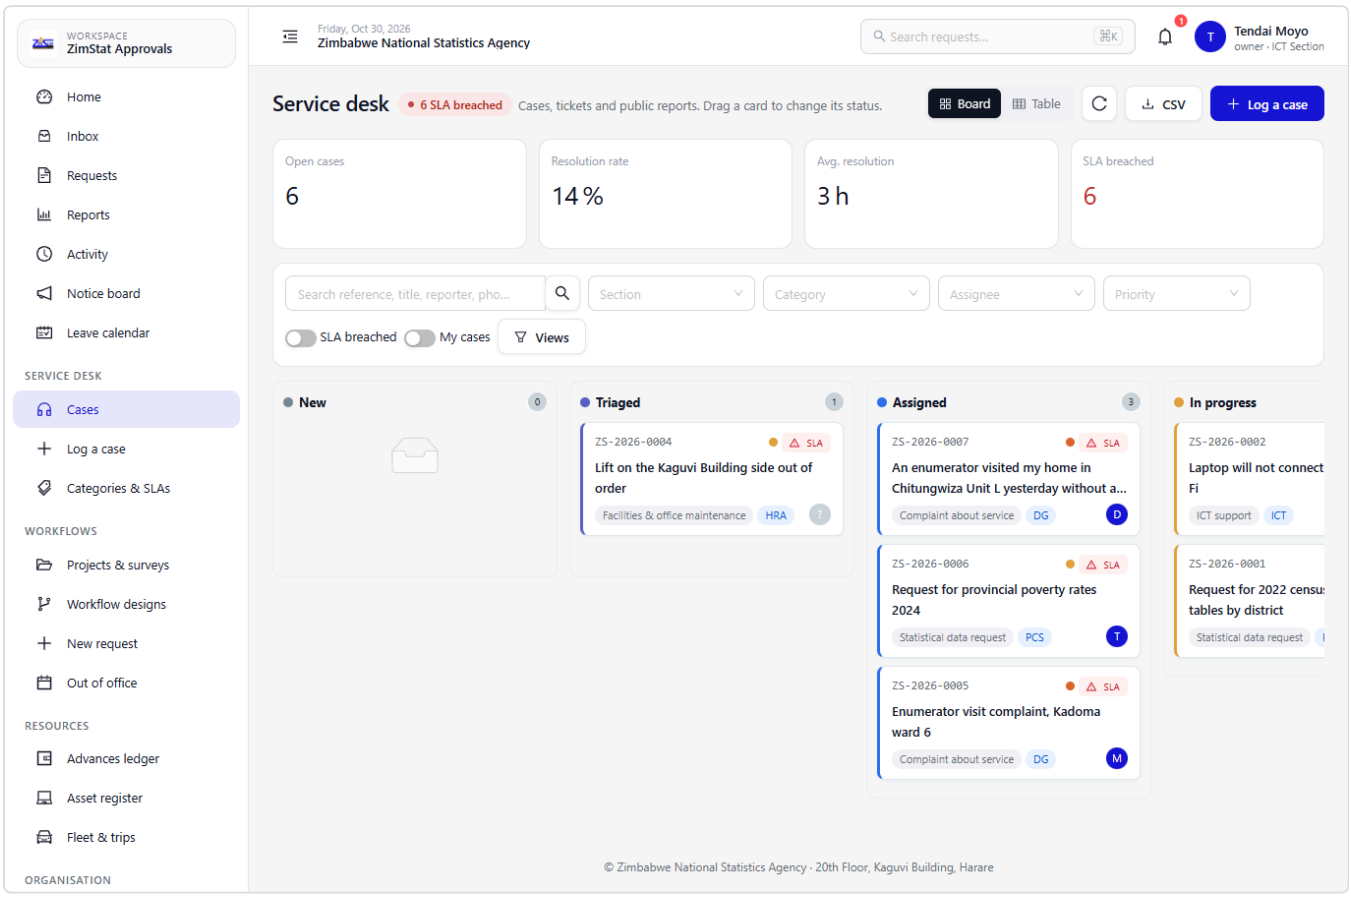

Project detail

7. Service desk: cases and tickets

The service desk handles anything that is not a form: ICT support, system access, facilities, finance queries, complaints about field work, and data requests from the public.

The board

The service desk board

Cases opens the board: one column per status, a card per case with a colour strip for status, a priority dot, the category, the section and the assignee. Drag a card to another column to change its status; officers follow the normal order (for example assigned → in progress → resolved) while administrators may move a card anywhere. Every move is recorded in the case timeline, and a reason can be made mandatory in settings.

The cards at the top show open cases, the resolution rate, the average time to resolve and the number of SLA breaches. The filter bar narrows by section, category, assignee, priority, "SLA breached" and "My cases"; **Views** saves a set of filters for next time. The **Table** view shows the same cases as a sortable, paginated grid.

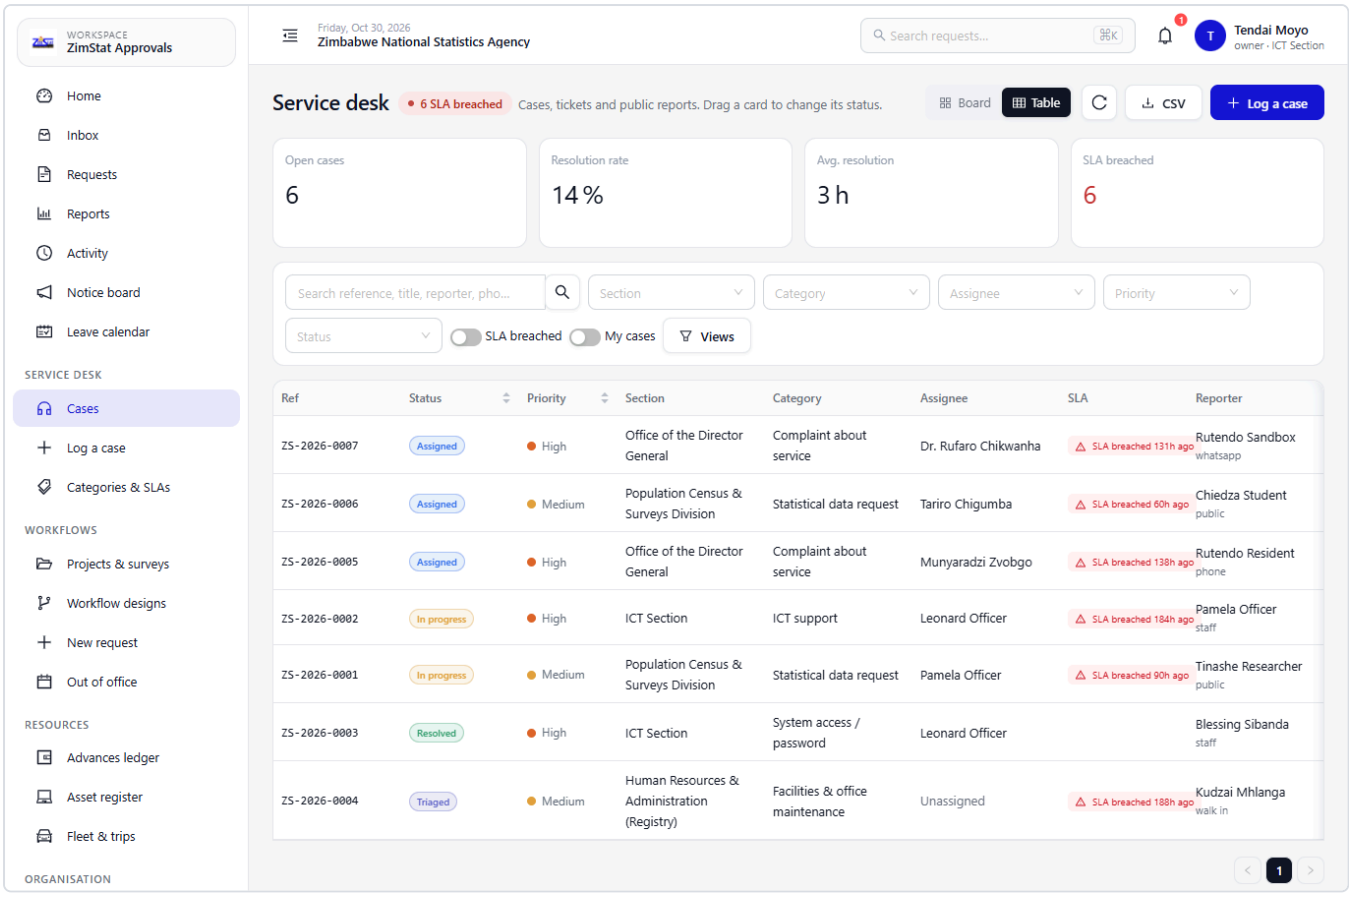

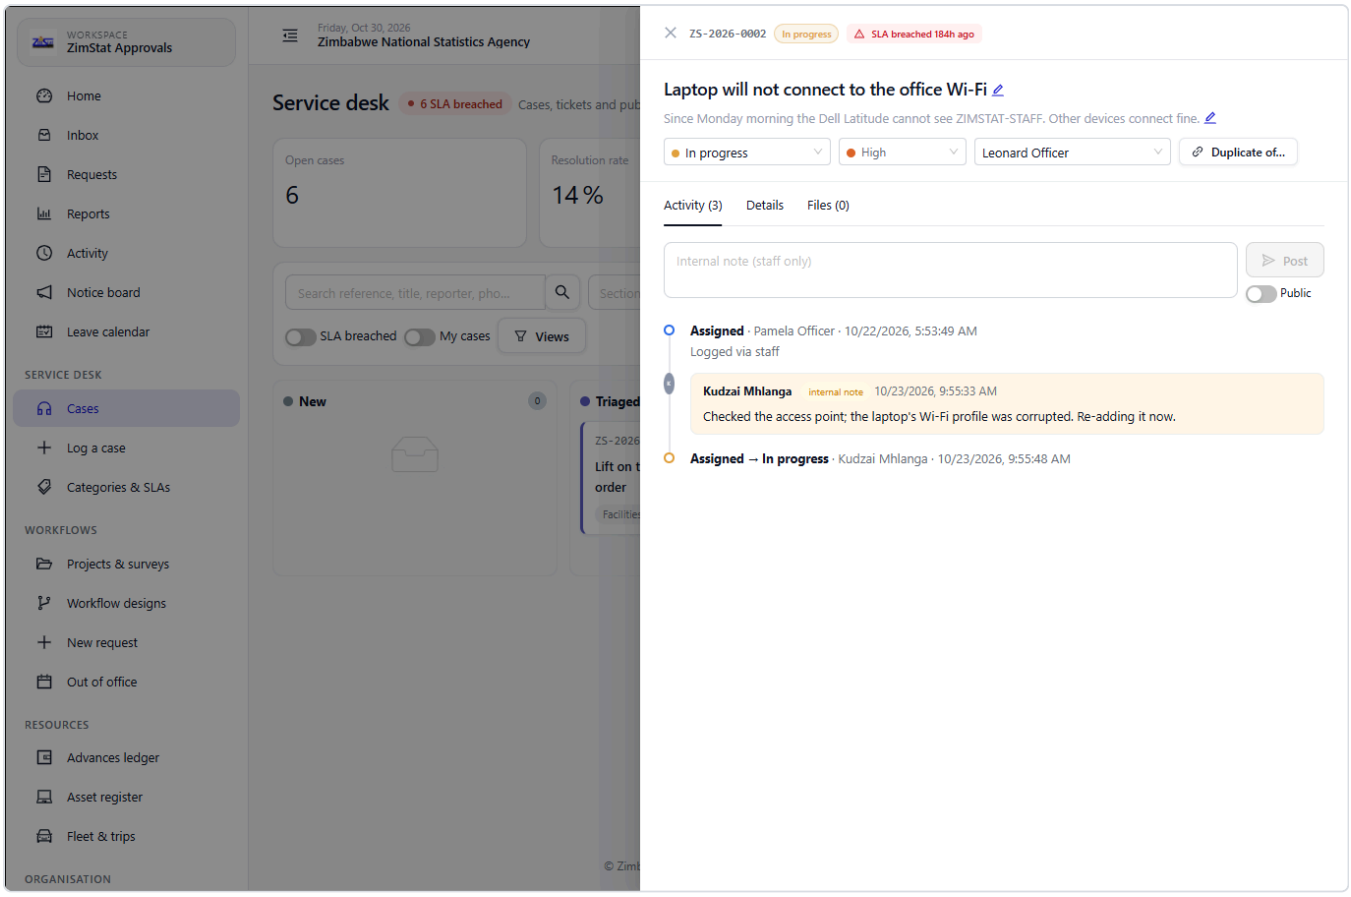

Table view

Working a case

Click a card to open the case panel.

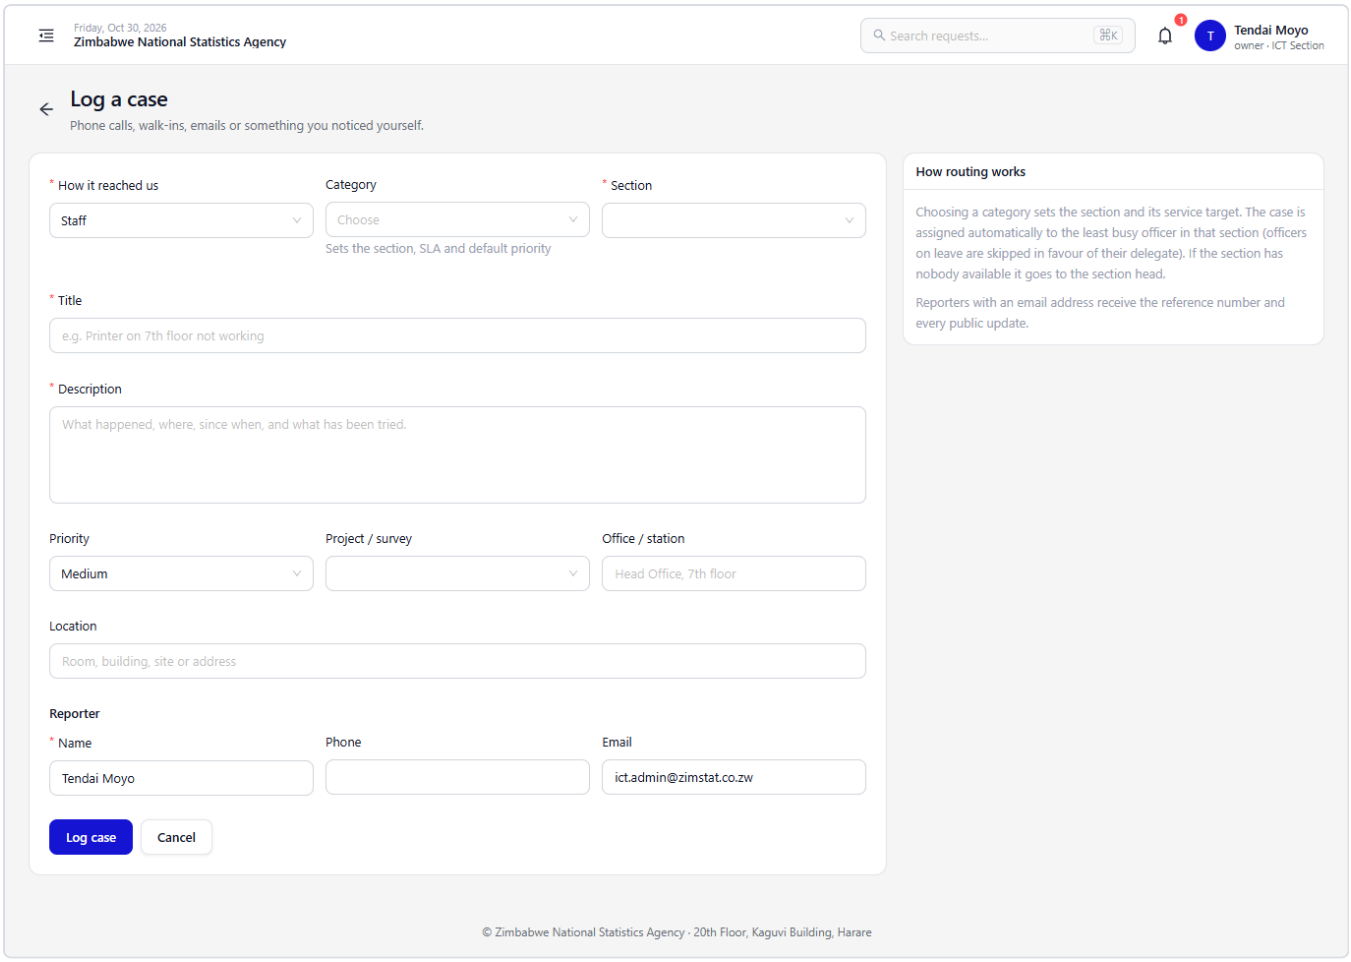

A case

- **Status**, **priority** and **assignee** are changed from the drop-downs at the top. Reassigning is limited to managers and administrators.
- **Activity** shows the timeline and the conversation. A note is **internal** (staff only) by default; switch **Public** to send an update to the reporter by email and WhatsApp and to show it on the tracking page.
- **Details** holds the section, category, project, SLA target, the reporter's contact details, location and office.
- **Files** lists attachments; each can be marked public (shown on the tracking page) or staff-only.
- **Duplicate of…** links the case to an earlier one, rejects it and tells the reporter which case is being handled.

If two people edit the same case at once, the second save is refused with a message to refresh; nothing is overwritten silently.

Logging a case yourself

Use **Log a case** for phone calls, walk-ins, emails or something you noticed. Choosing a category sets the section, the service target and the default priority. While you type, similar recent cases are suggested so duplicates are avoided.

Logging a case

How cases are assigned

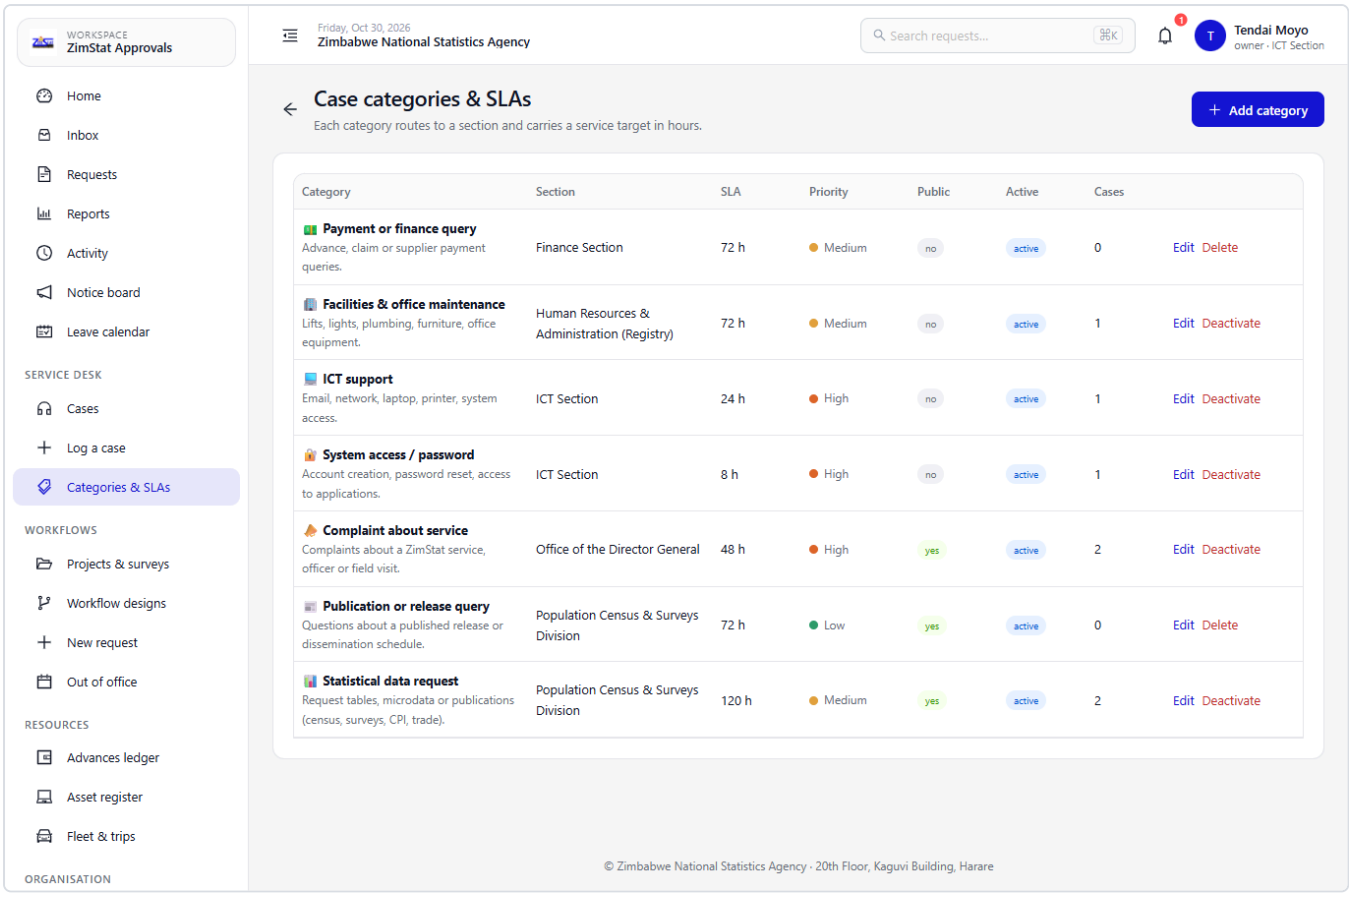

A new case goes to the least-busy active officer in the responsible section. Officers on an active out-of-office delegation are skipped in favour of their delegate. If the section has nobody available, the case goes to the section's default assignee, then to the section head. When a staff member is deactivated, their open cases are reassigned automatically. Administrators can instead require the section head to triage every case first (Settings, Service desk & portal).

Service targets (SLA)

Each category carries a target in hours. The assignee is warned before the target (24 hours by default) and the section head is notified when it is breached; both appear in the timeline. Reopening a case restarts the clock.

Categories and SLAs

Administrators maintain categories under **Categories & SLAs**: the section that handles them, the target in hours, the default priority, and whether the public may choose the category on the portal and WhatsApp.

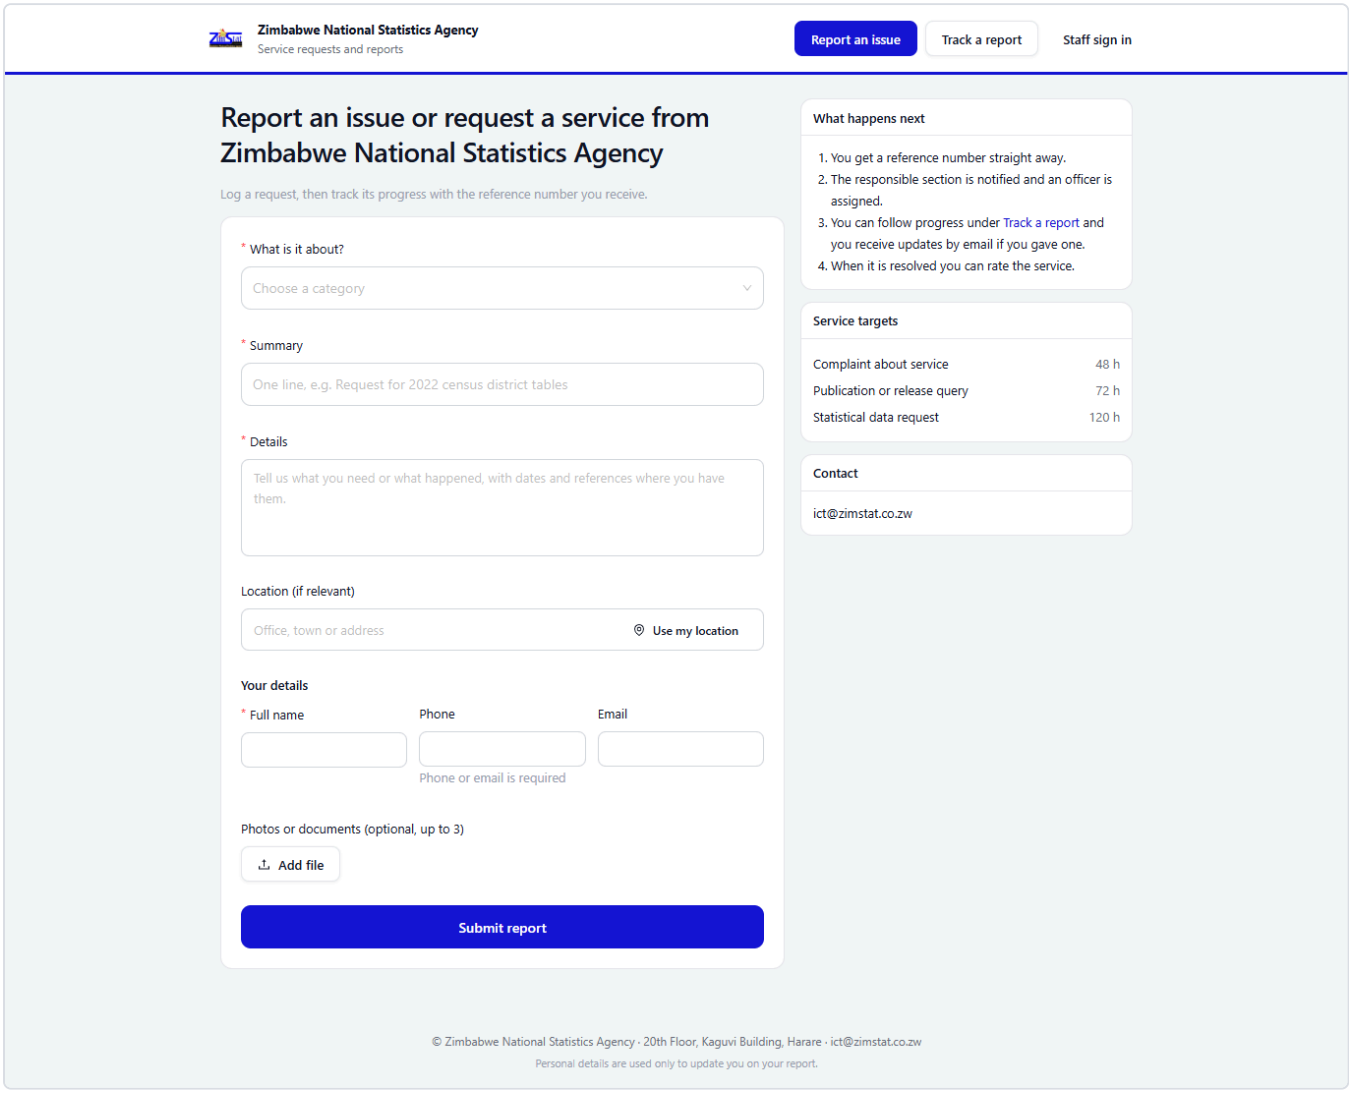

Categories and SLAs

8. Public portal and WhatsApp

Reporting on the website

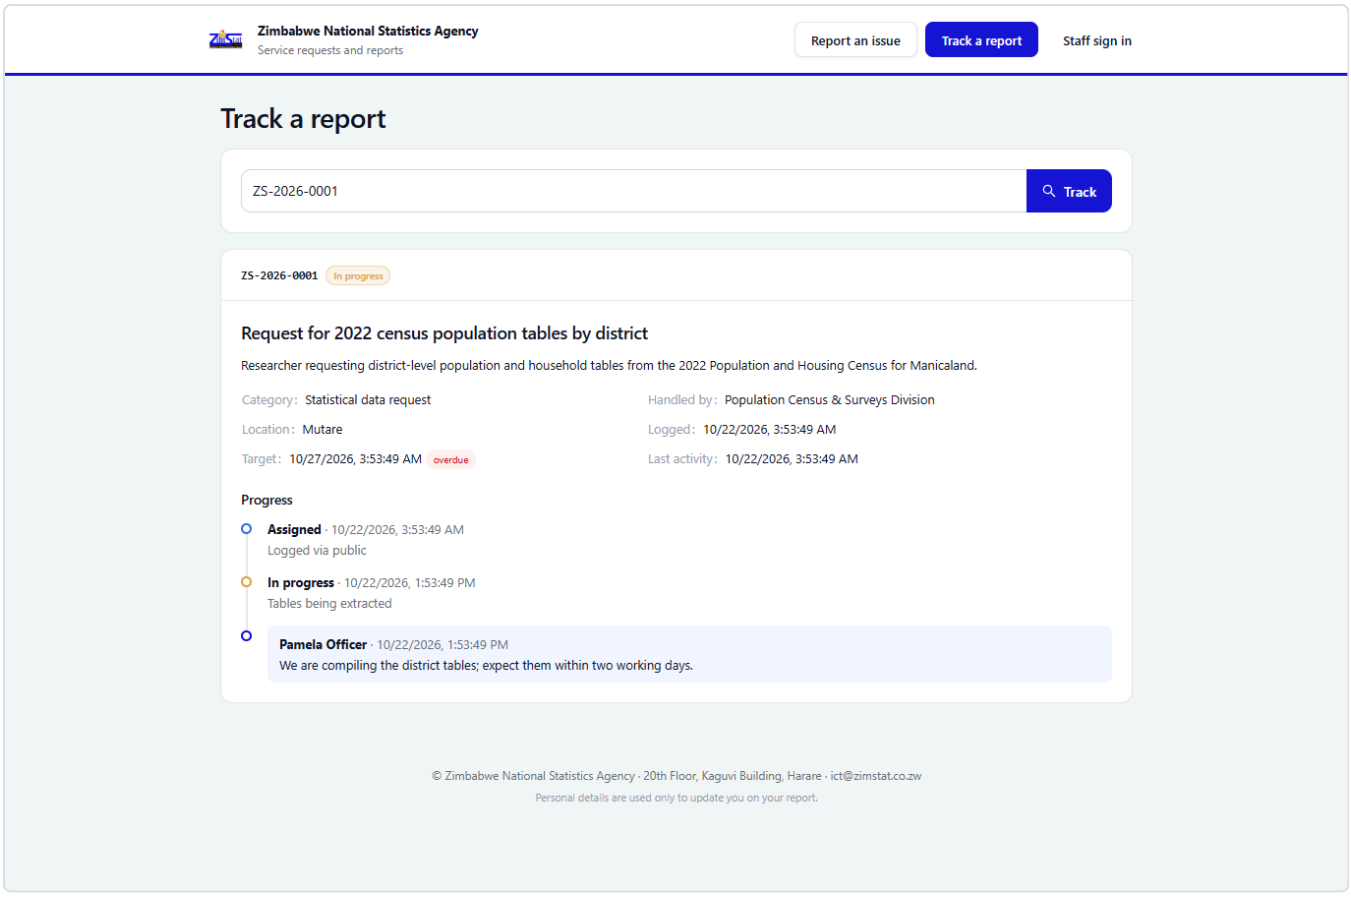

Members of the public, researchers and other agencies can log a request without an account at **/report**. They choose a category, describe the request, optionally share a location and photos, and give a phone number or email. They receive a reference number immediately and an email with every public update.

Public report form

Tracking

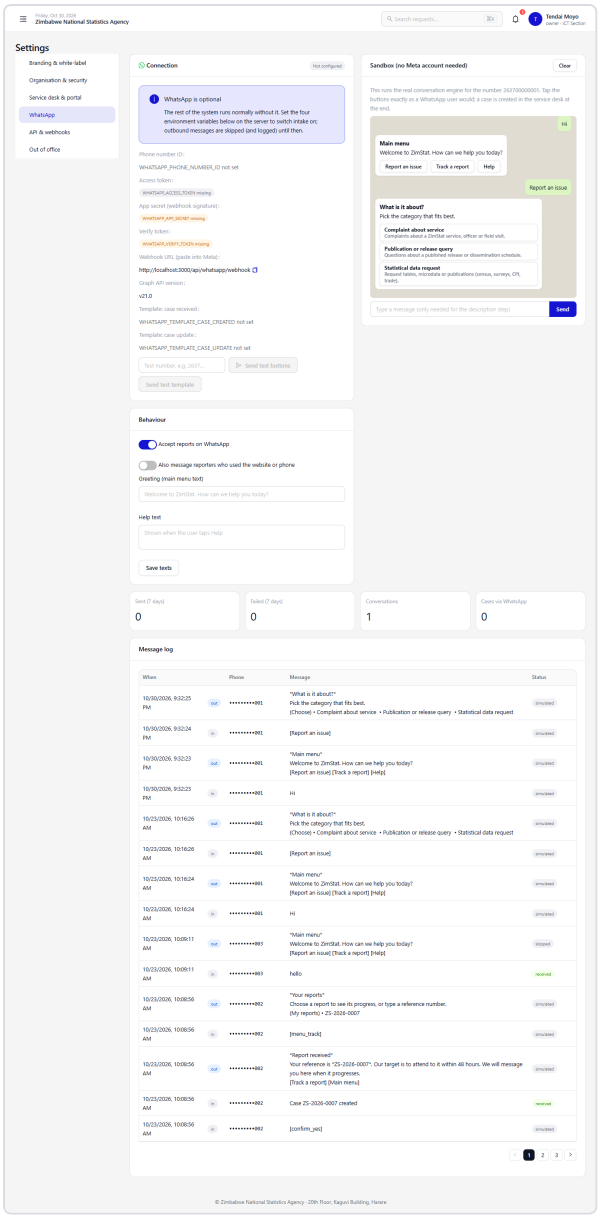

At **/track** anyone with a reference number can see the status, the timeline, public updates and public files, and can rate the service once the case is resolved. Personal details are never shown there.

Public tracking page

WhatsApp

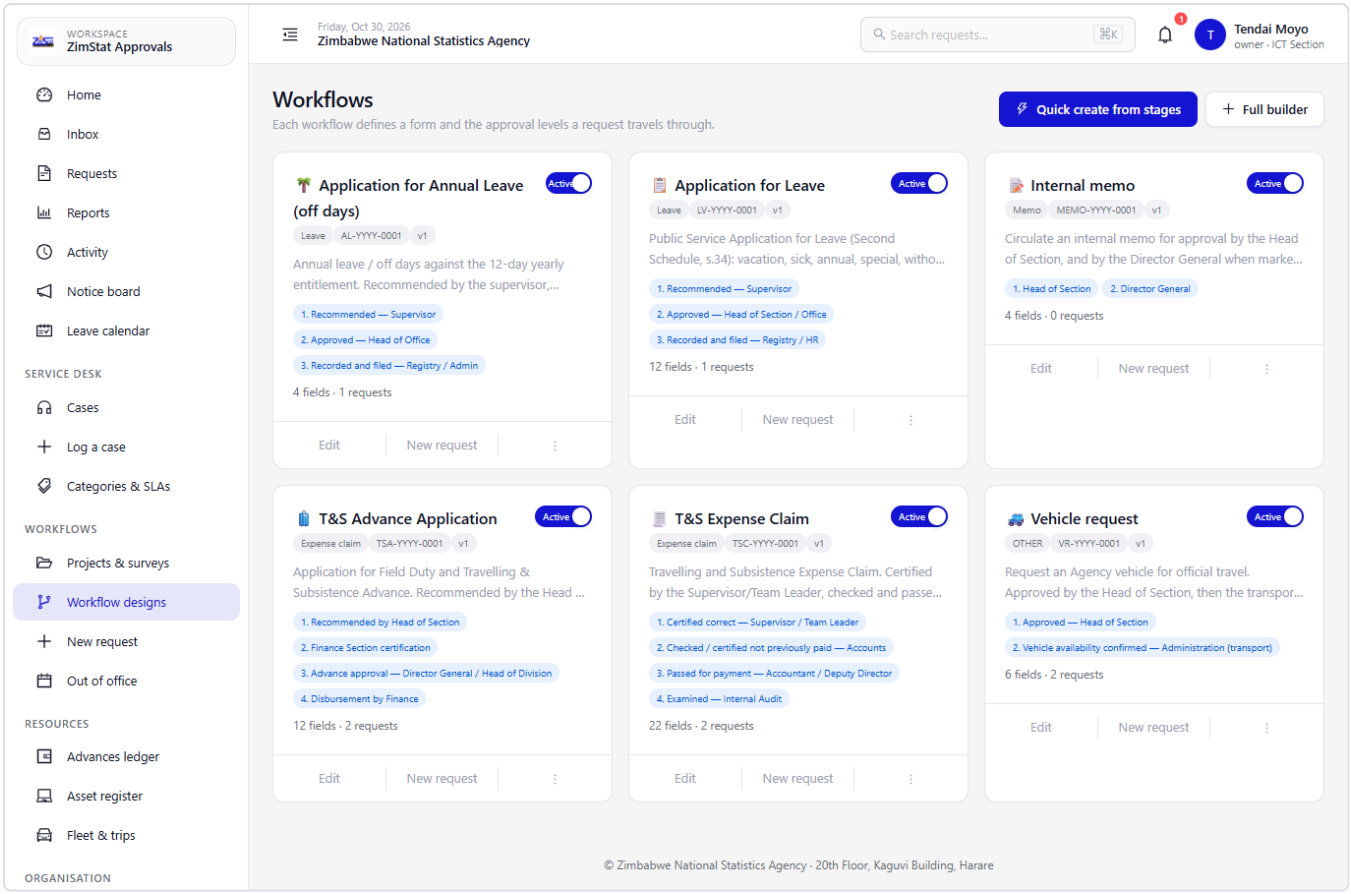

When the ICT administrator has connected the Agency's WhatsApp Business number, the public can report and track on WhatsApp using buttons and menus; only the description of the issue is typed. Reporters receive the reference and status updates as WhatsApp messages. Cases logged this way appear on the board with the source WhatsApp. Settings, WhatsApp shows the connection status and includes a sandbox where staff can try the conversation without a WhatsApp account.

WhatsApp settings and sandbox

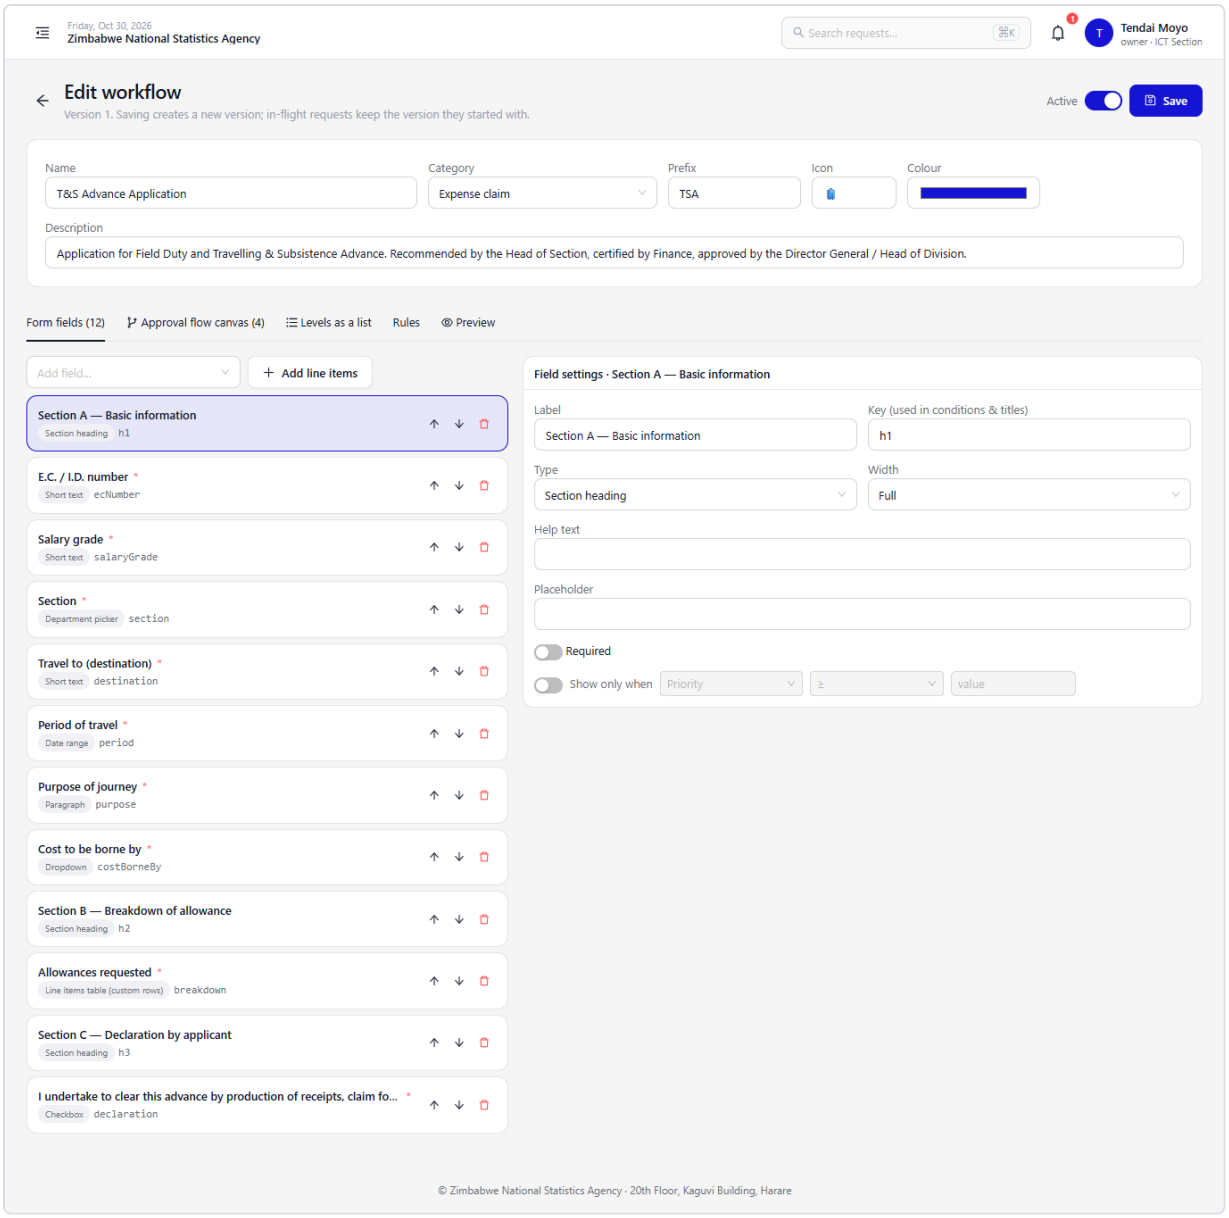

9. Designing workflows

Administrators maintain the forms under **Workflow designs**. Each design has its fields, its approval levels and its rules. Editing a design never changes requests already in flight; they keep the version they were submitted with.

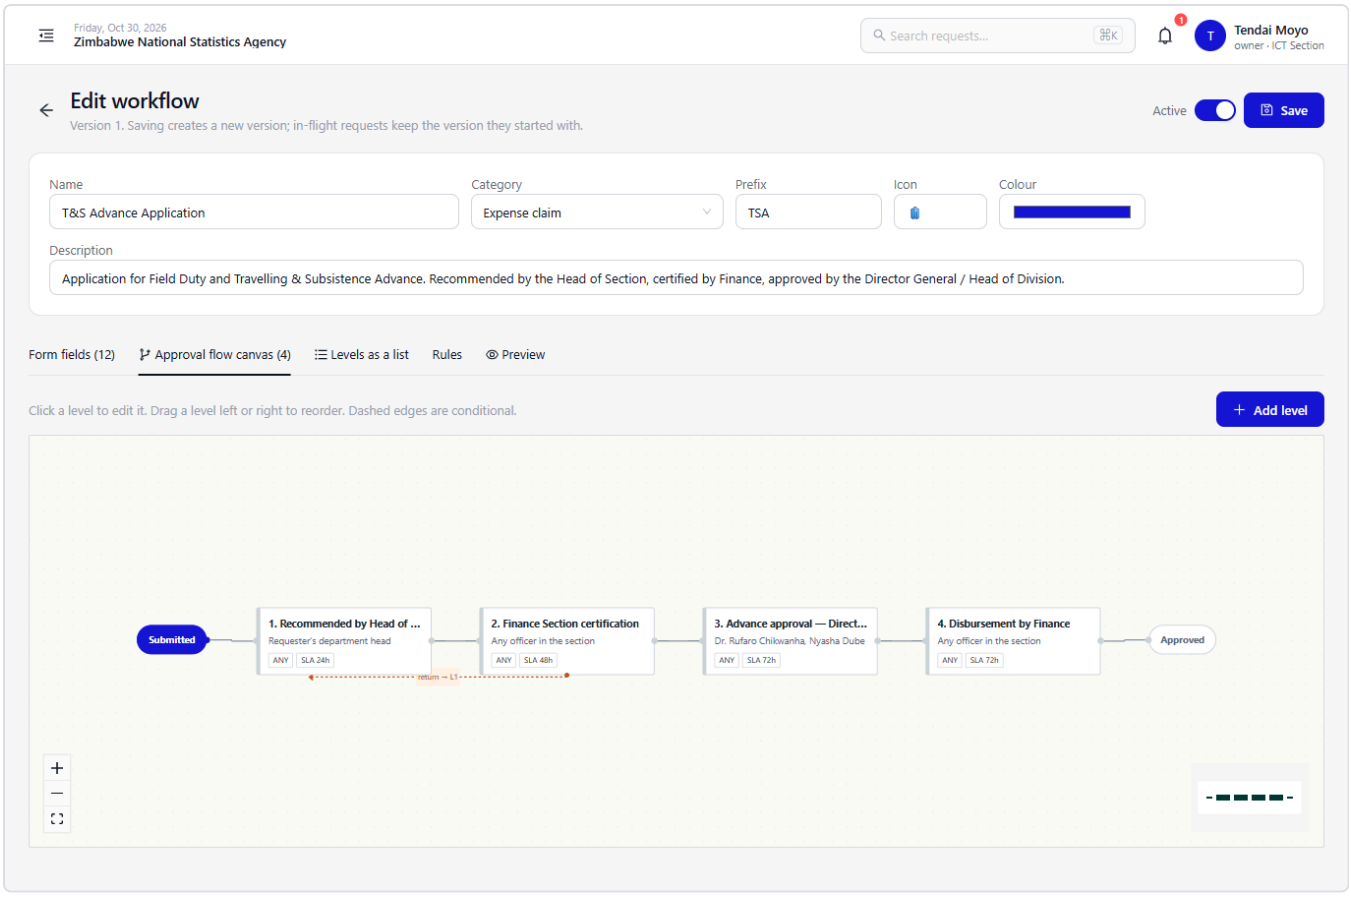

Workflow designs

Quick create builds a workflow by naming its stages and choosing who signs at each. The full builder has four tabs.

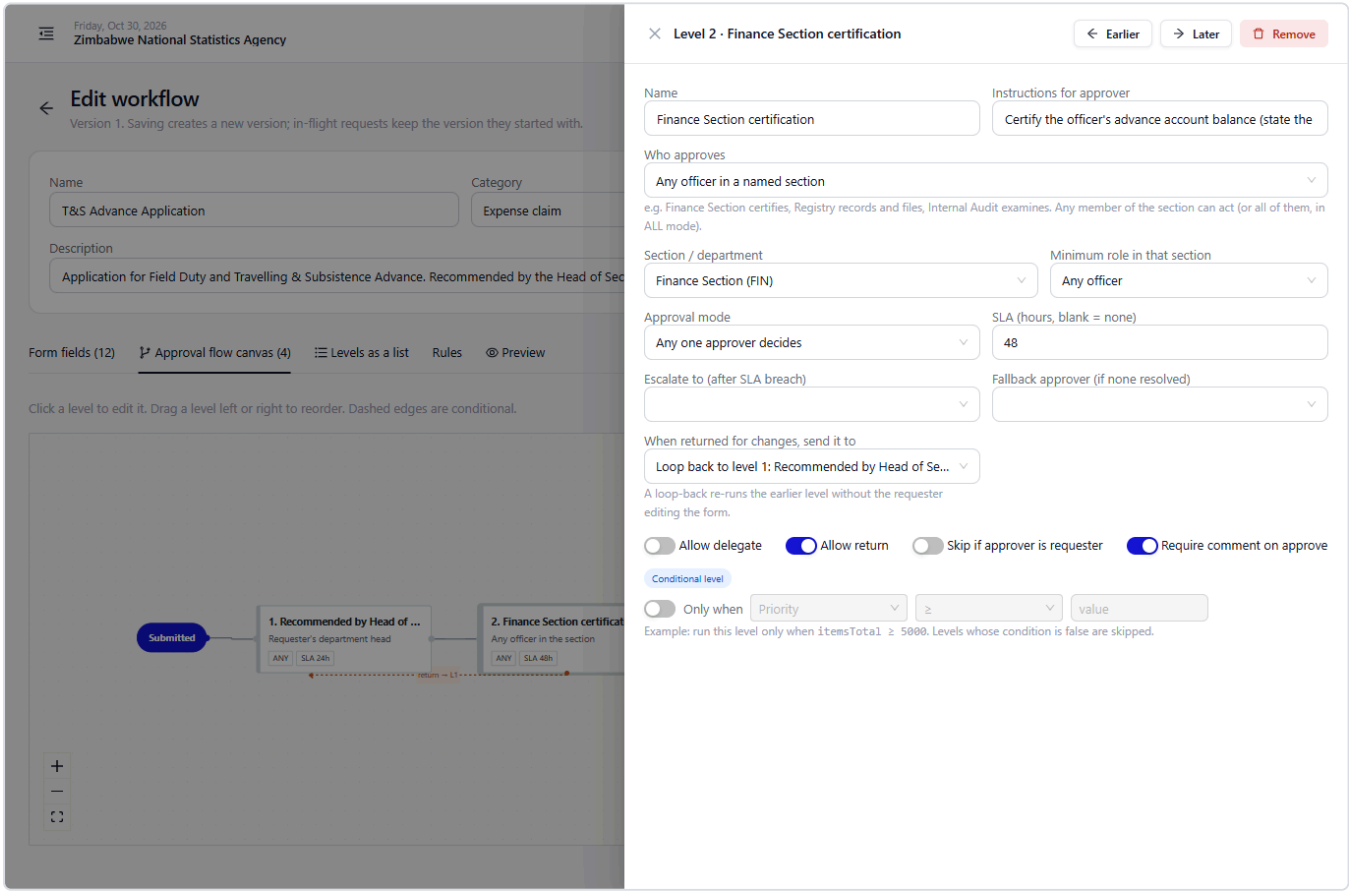

The Fields tab

- **Fields**: text, numbers, currency, dates, selects, person and section pickers, check boxes, files and line-item tables with computed columns.
- **Canvas**: the route drawn as a diagram. Click a level to set who approves (section head, supervisor, any officer in a named section, named people, or a person chosen on the form), Any or All mode, the SLA and escalation, a condition (for example only when the total exceeds a threshold), and where a return goes.

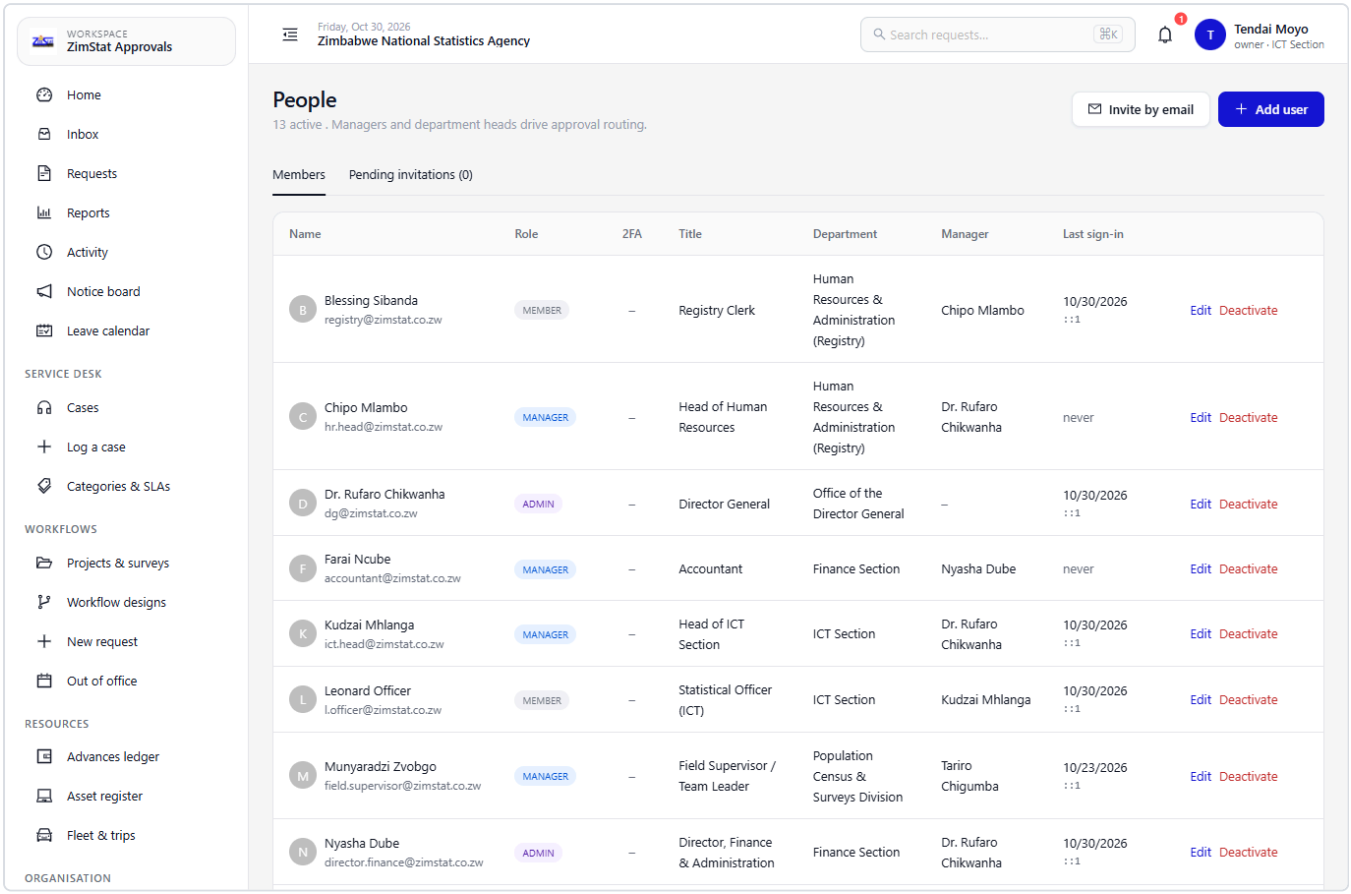

The canvas

Level settings

- **Rules**: reference prefix, whether officers may withdraw, delegation, the cost field used for projects, whether a project is required, attachments.
- **Preview**: the form as an officer will see it.

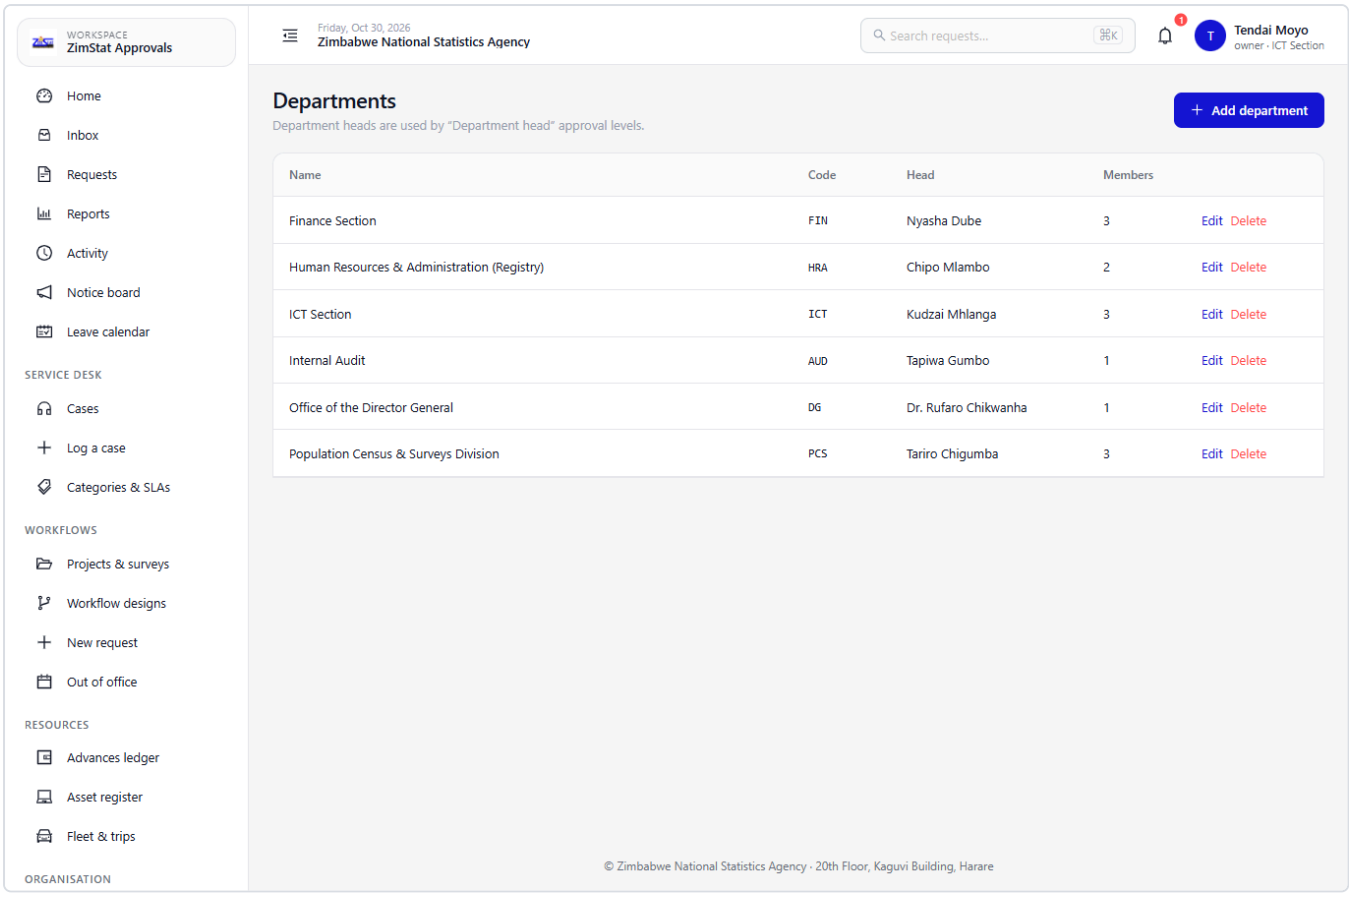

10. People and sections

People

People lists every account with role, section, supervisor and status. Administrators invite colleagues by email (an invitation link valid for seven days), create accounts with a temporary password that must be changed at first sign-in, change roles and sections, deactivate accounts (their open cases are reassigned), unlock accounts and reset two-factor authentication.

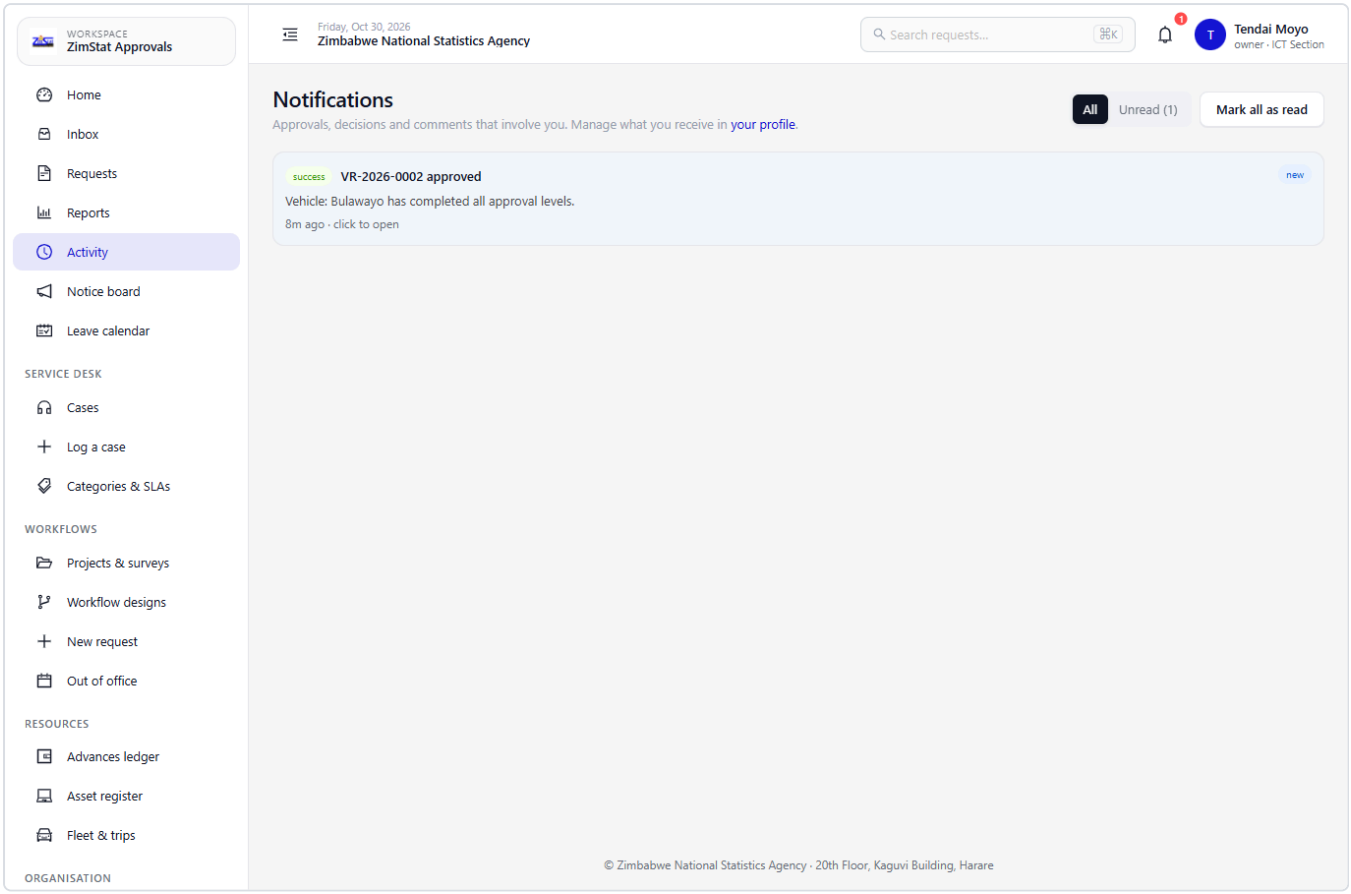

The **supervisor** set on a person is who "Supervisor" levels route to; the **head** set on a section is who "Head of Section" levels route to.

Sections and divisions

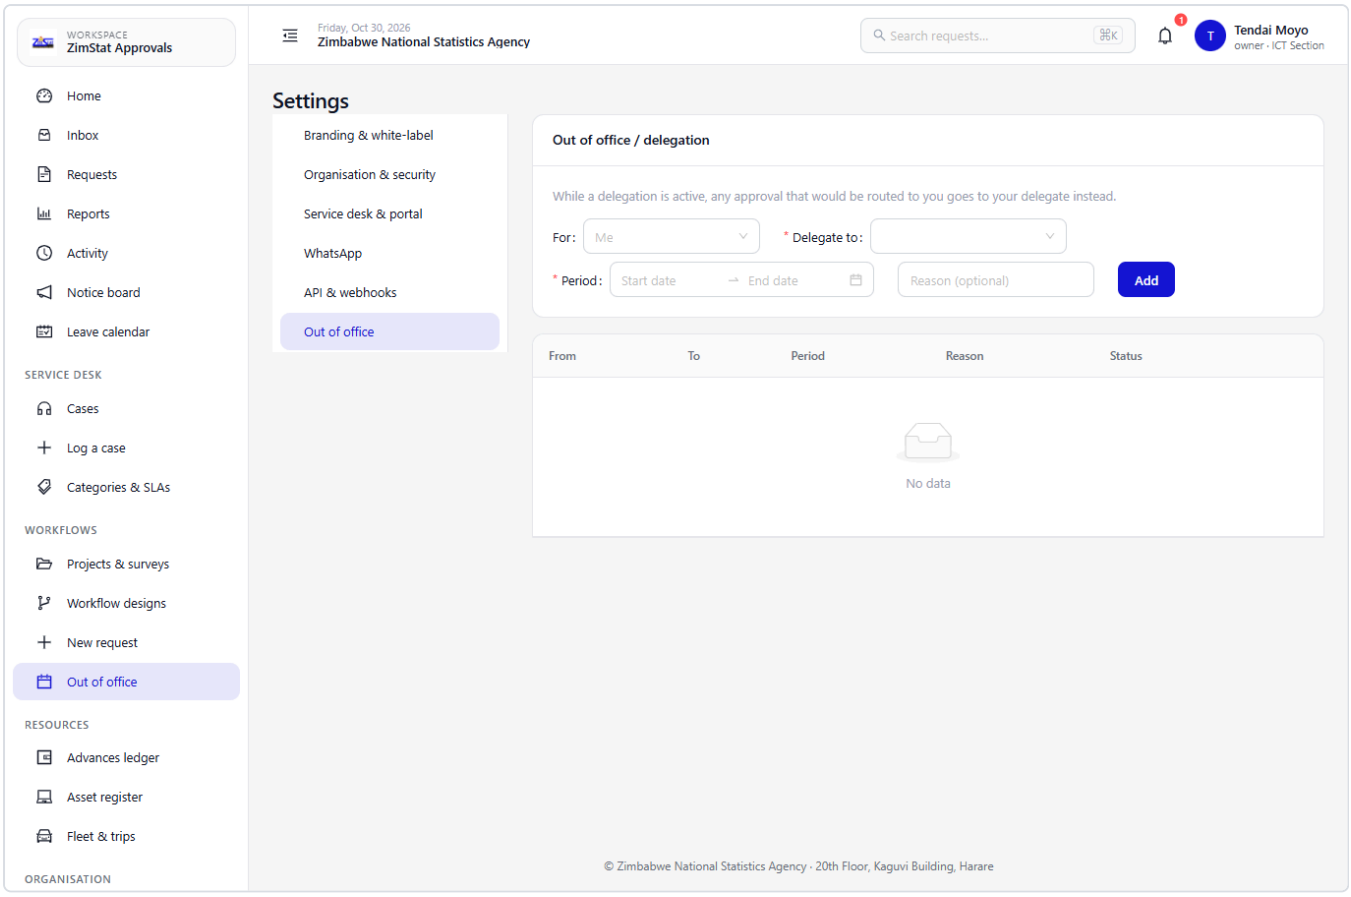

Sections & divisions holds the Agency's structure: each section has a code, a head and, for the service desk, an optional default assignee.

11. Notifications, activity and out of office

Notifications

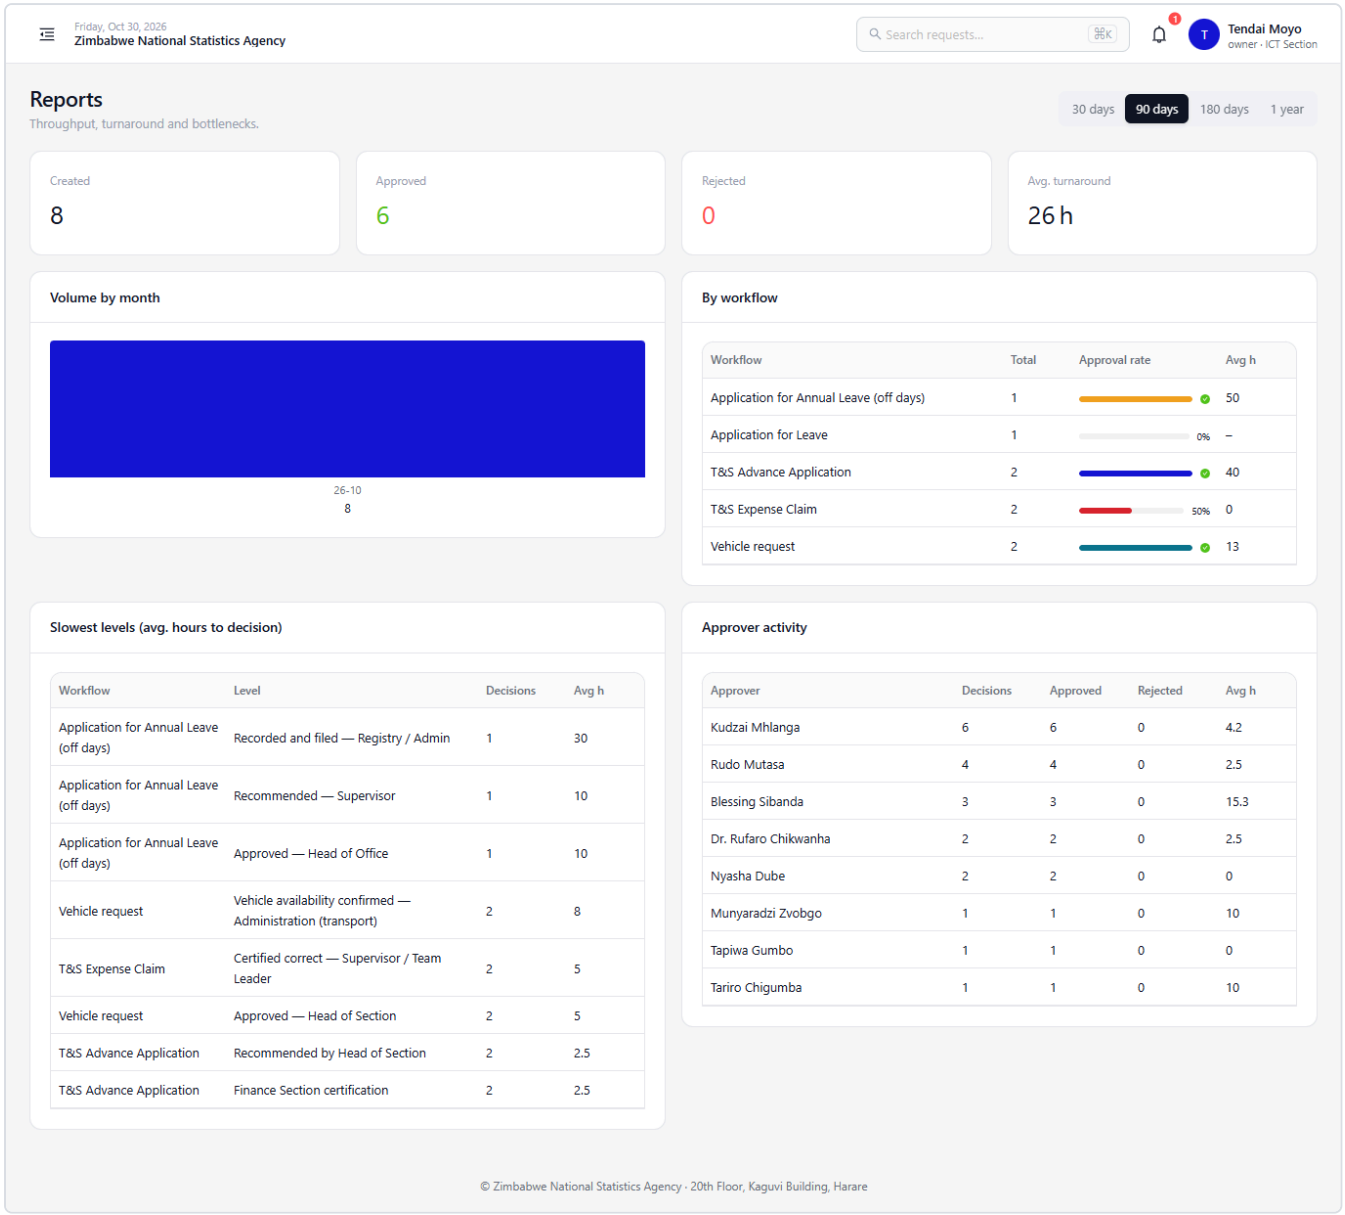

The bell shows unread notifications; **Activity** lists them all. You are notified when something waits on you, when your request or case changes, when someone comments, and when an SLA is at risk. The same events are sent by email according to your preferences under Profile, Notifications (per event or as a daily or weekly digest). Security alerts are always emailed.

Out of office

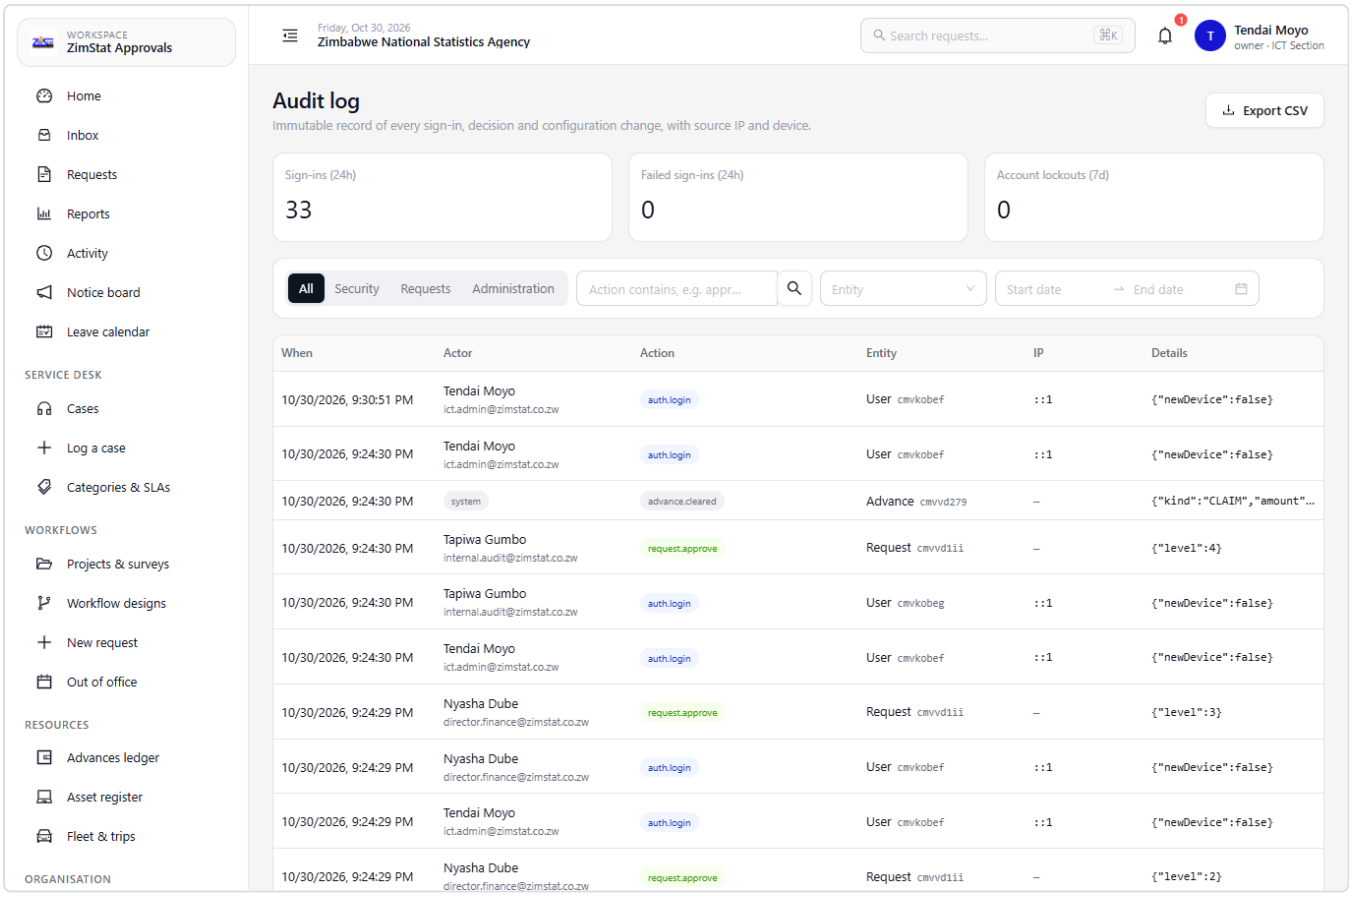

Going on leave? Set an **out-of-office** delegate with start and end dates. Approvals routed to you also reach the delegate, marked On behalf of, and new service desk cases are assigned to the delegate instead of you.

12. Reports and the audit log

Reports

Reports shows volumes, approval rates, cycle times, the slowest levels and spend by project. The service desk board carries its own figures: open cases, resolution rate, average resolution time and SLA breaches, with breakdowns by section, priority and source available through the API for dashboards.

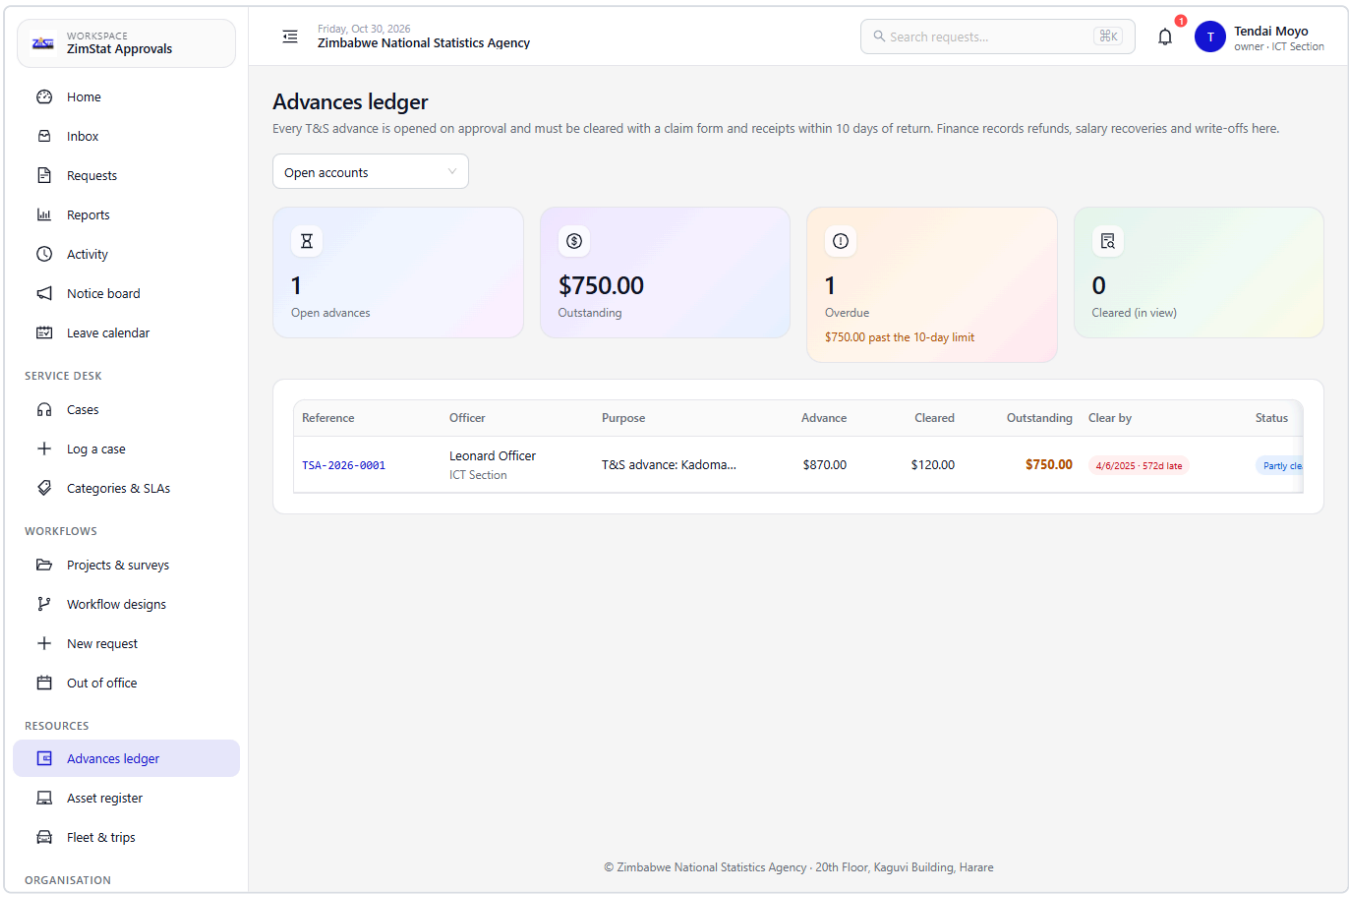

Audit log

The **audit log** is an unalterable record of everything: sign-ins, password and two-factor changes, every request and case action, changes to workflows, people, sections, settings and API keys, each with who, when, IP address and browser. Filter and export it for auditors.

13. Resource modules

Five modules sit beside the workflows and the service desk under **Resources** and **Work** in the sidebar. They use the same people, sections and projects, and most of their records are created automatically by approvals.

Advances ledger

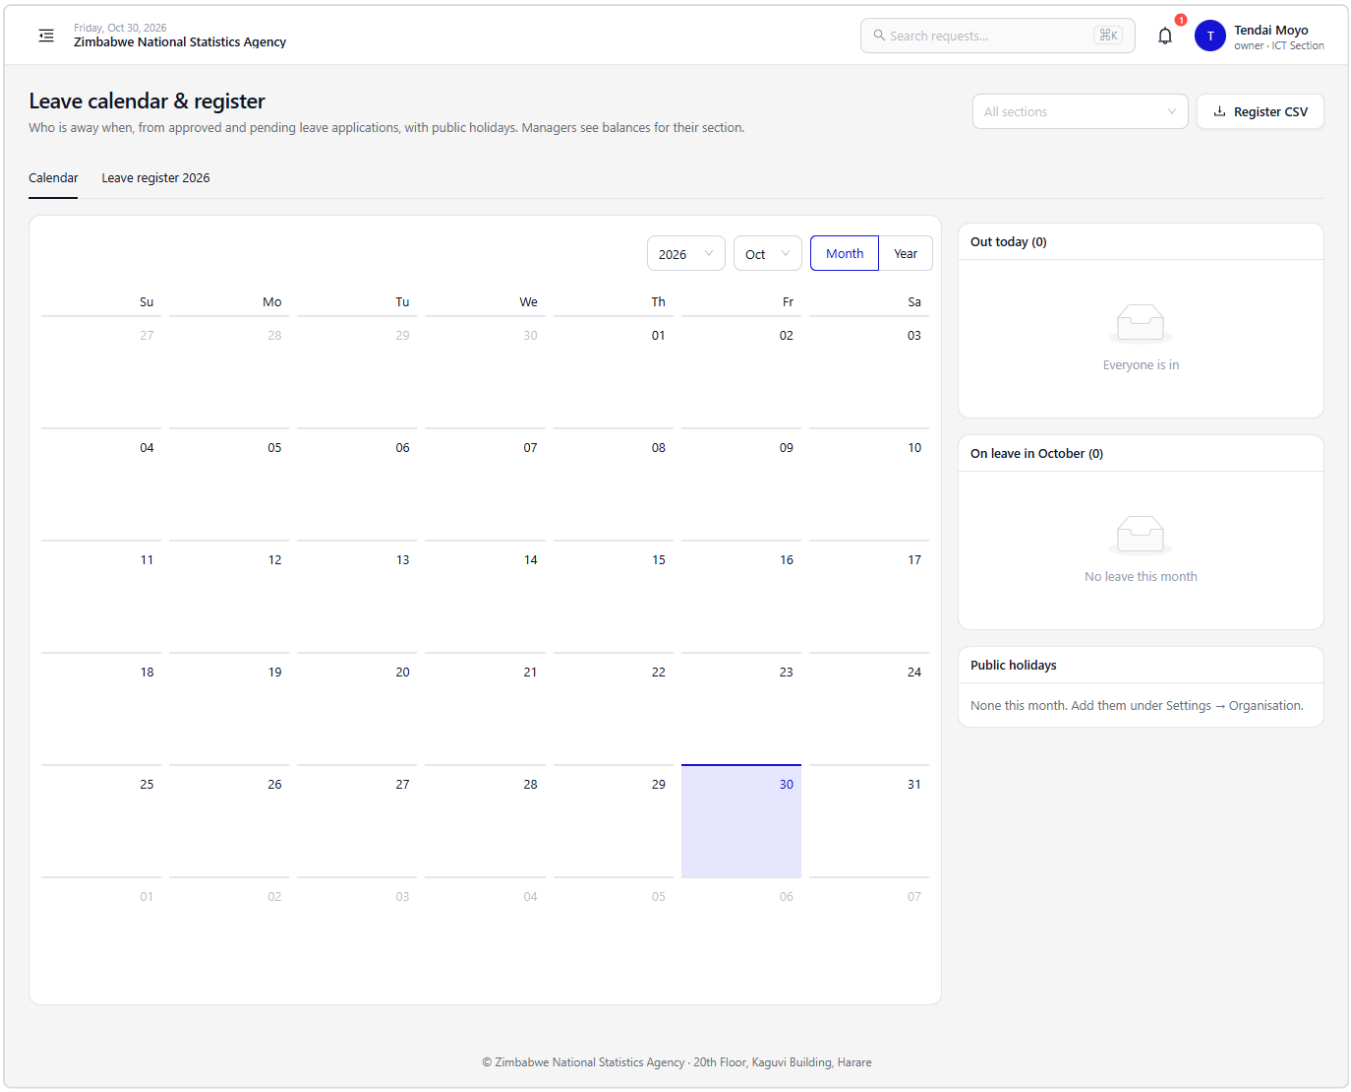

Advances ledger

Every officer has an advance account, exactly as the Finance Section keeps it on paper. When a **T&S Advance Application** reaches final approval the system opens an advance for the approved amount, dated from the disbursement, and sets the clearance date to ten days after the travel period ends. When a **T&S Expense Claim** that lists the advance under *Advances received* is approved, the claim settles the advance automatically; a claim that lists no references settles the officer's oldest open advances with the claim total.

- Officers see their own account; section heads see their section; the Finance Section and administrators see everyone.
- The balance strip on every T&S form shows what the Finance Section must certify: outstanding amount, number of advances and overdue ones.
- Finance records **cash refunds**, **salary recoveries** and **write-offs** from the ledger with a note or receipt number. Each movement is in the audit log.
- Overdue advances are flagged in red with the days late. The scheduler reminds the officer and the Head of Finance every three days, and the dashboard warns the officer whenever an advance is outstanding.

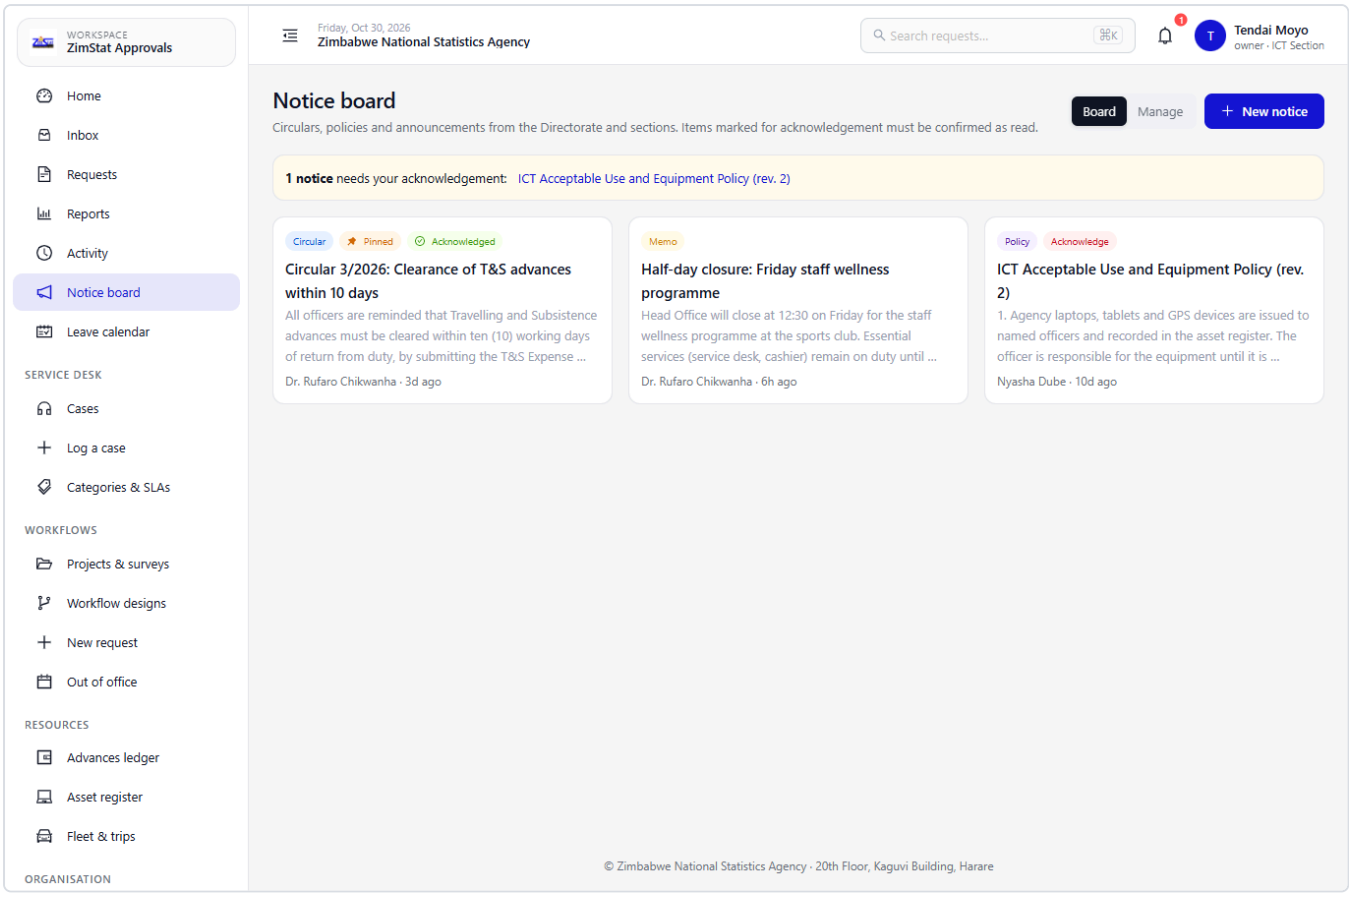

Leave calendar and register

Leave calendar

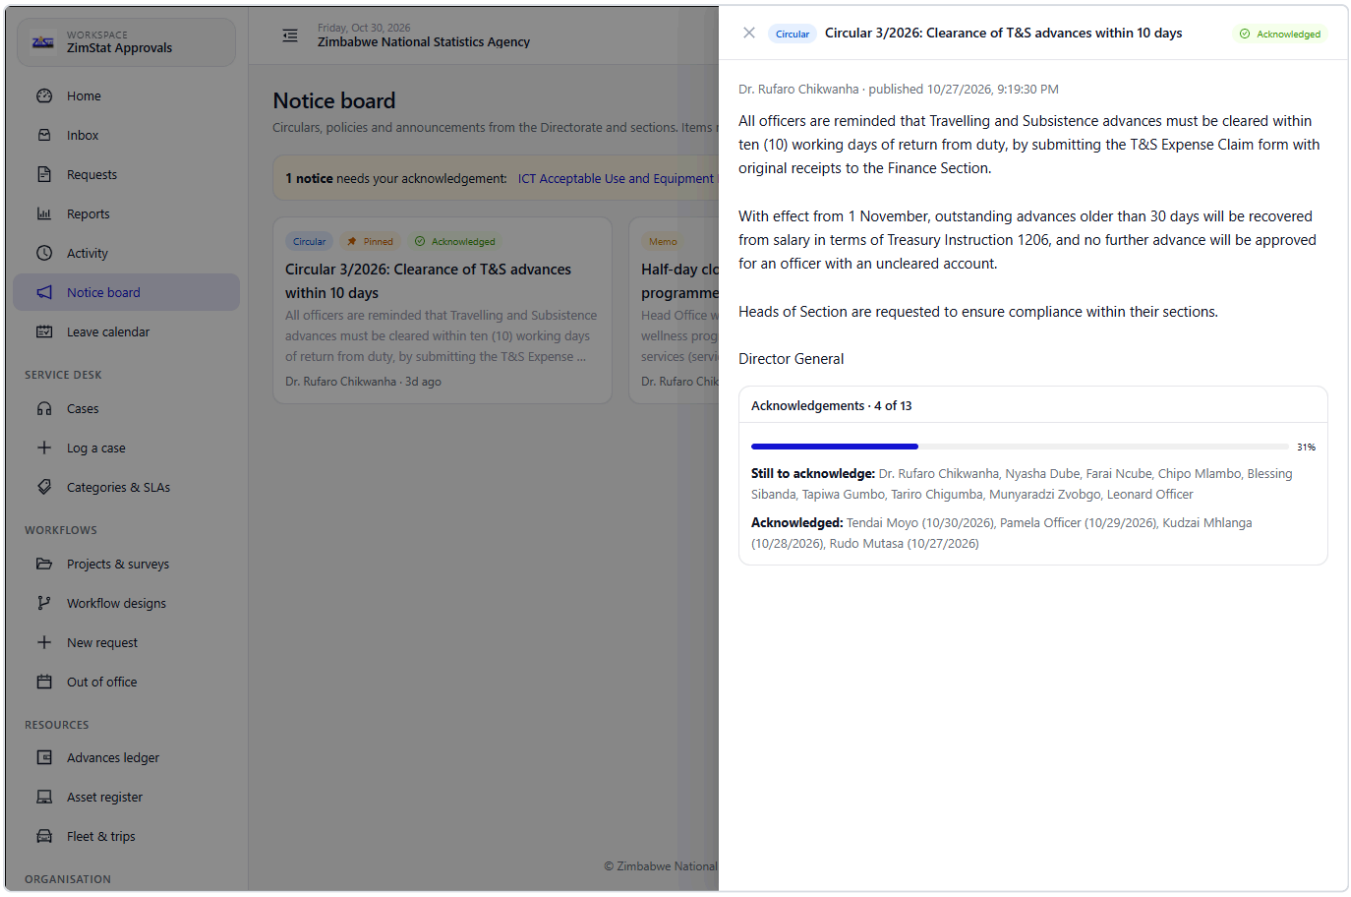

The calendar shows who is away in each month from approved leave applications (pending ones appear faded with a question mark) together with the gazetted public holidays, which administrators keep under Settings, Organisation. Officers see their section; managers can pick any section and export the **leave register** for the year as CSV: entitlement, annual leave taken, pending, remaining, sick and other leave per officer.

Notice board

Notice board

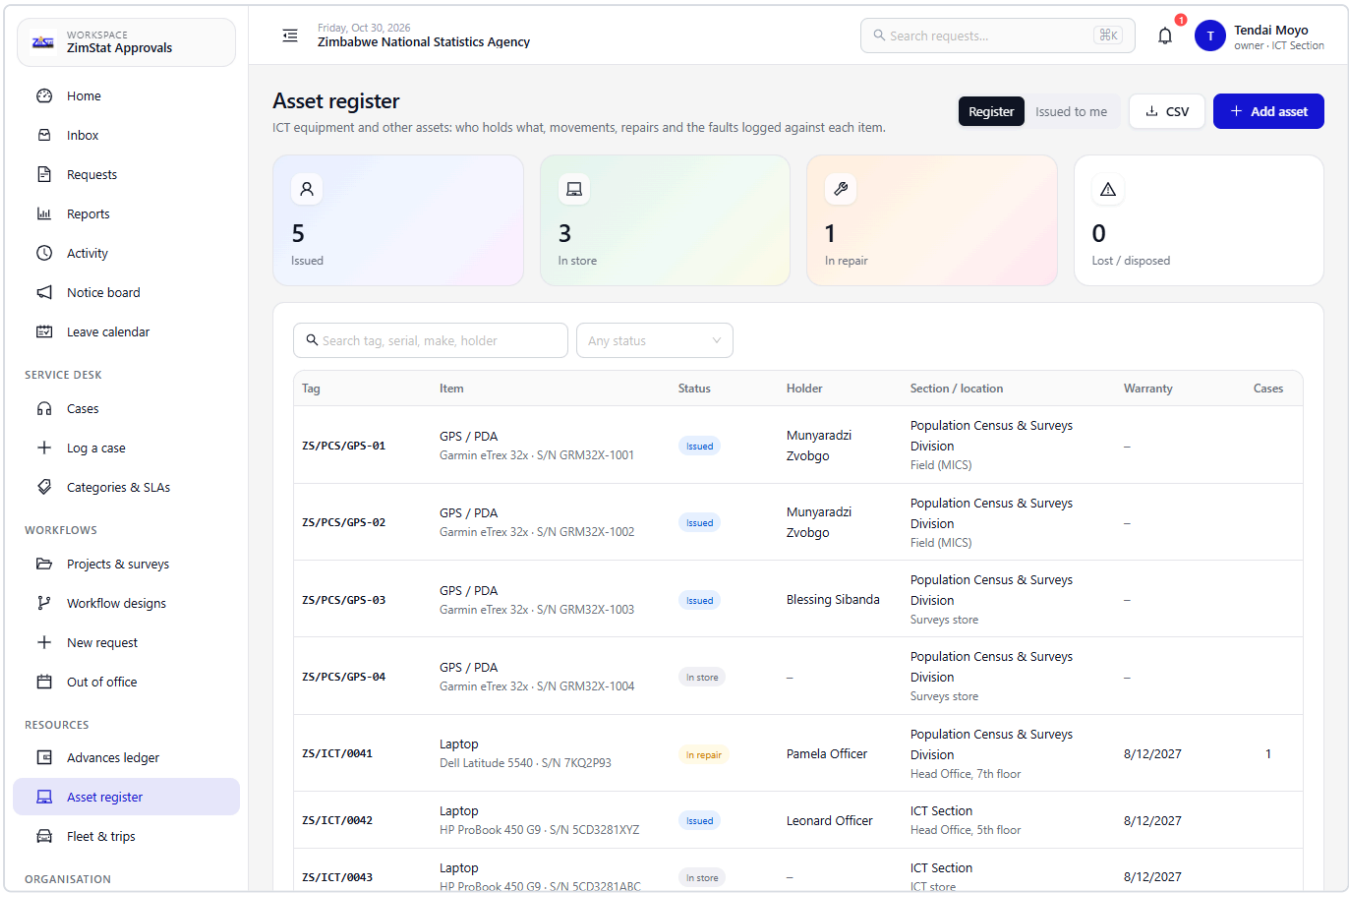

Circulars, policies, announcements and memos from the Directorate and sections. Administrators compose a notice, choose the audience by section and role, pin it, give it an expiry date and, for anything that must be read, mark it **requires acknowledgement**. Everyone in the audience is notified; items awaiting their acknowledgement are shown on their home page until they press **I have read and understood**.

Notice detail

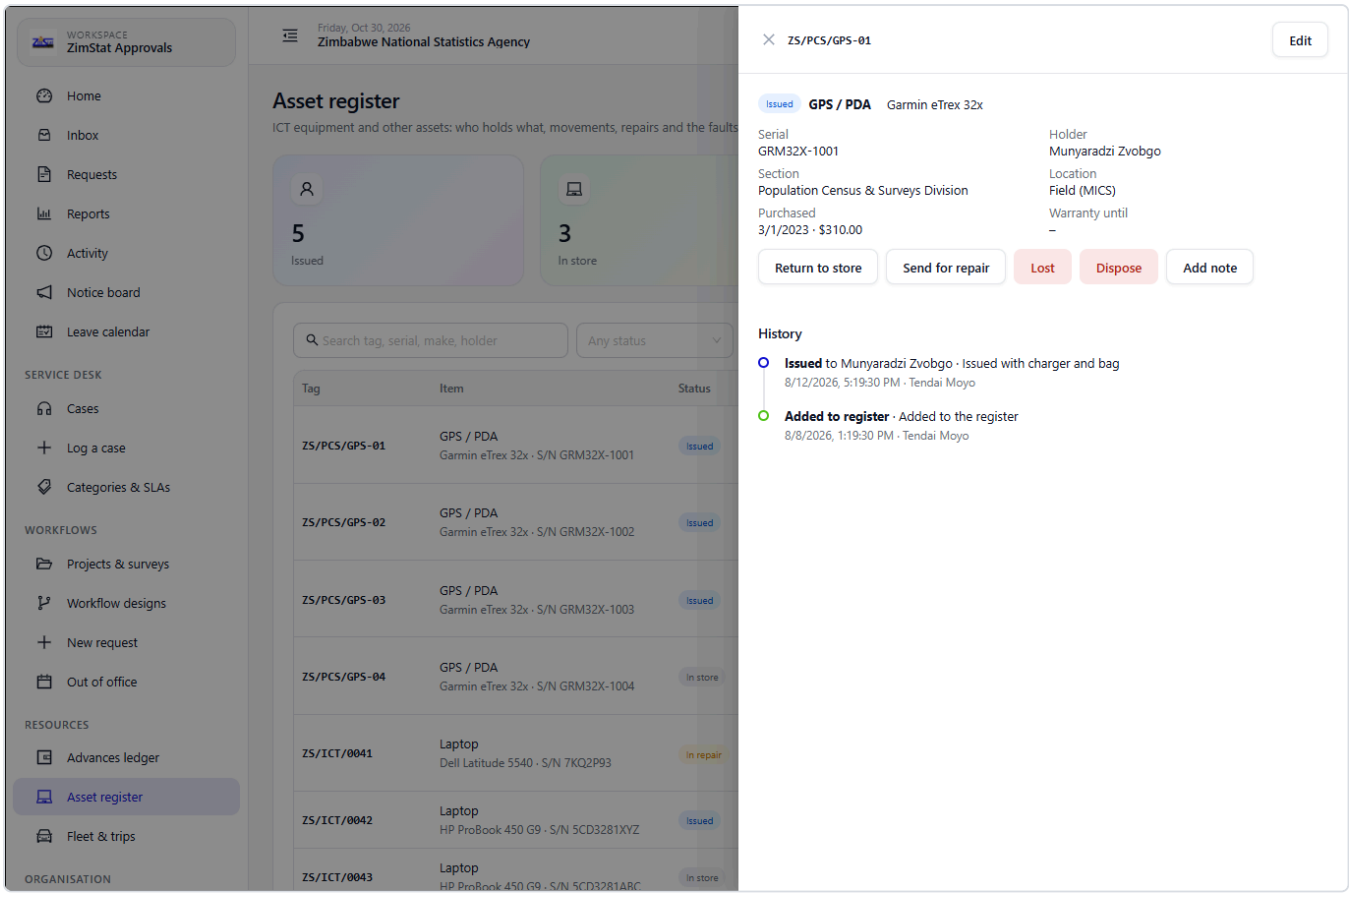

Administrators see the acknowledgement progress on each notice with the names still outstanding. Acknowledgements are recorded with the time and kept in the audit log.

Asset register

Asset register

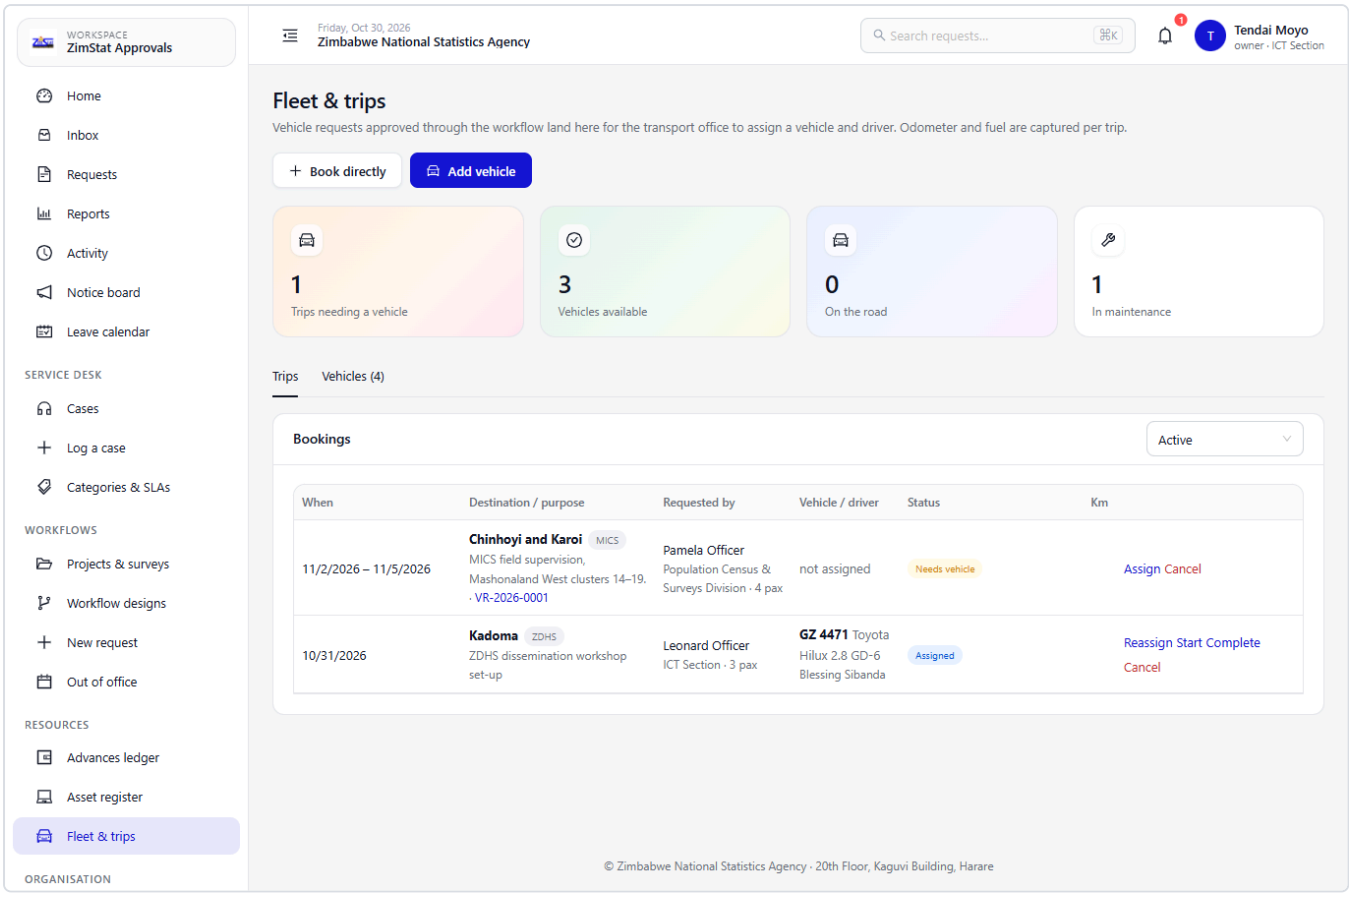

Laptops, tablets, GPS units, printers and other equipment, each with a tag, serial number, section, location, purchase date, cost and warranty. Managers **issue** an item to an officer (who is notified), take it **back to store**, send it for **repair**, and mark it **lost** or **disposed**; every movement is kept in the item's history.

Asset detail

Officers see what is issued to them under *Issued to me*. A service desk case can be linked to the faulty item from the case panel's Details tab, so the register shows every fault logged against an item. Export the register as CSV for stock-takes.

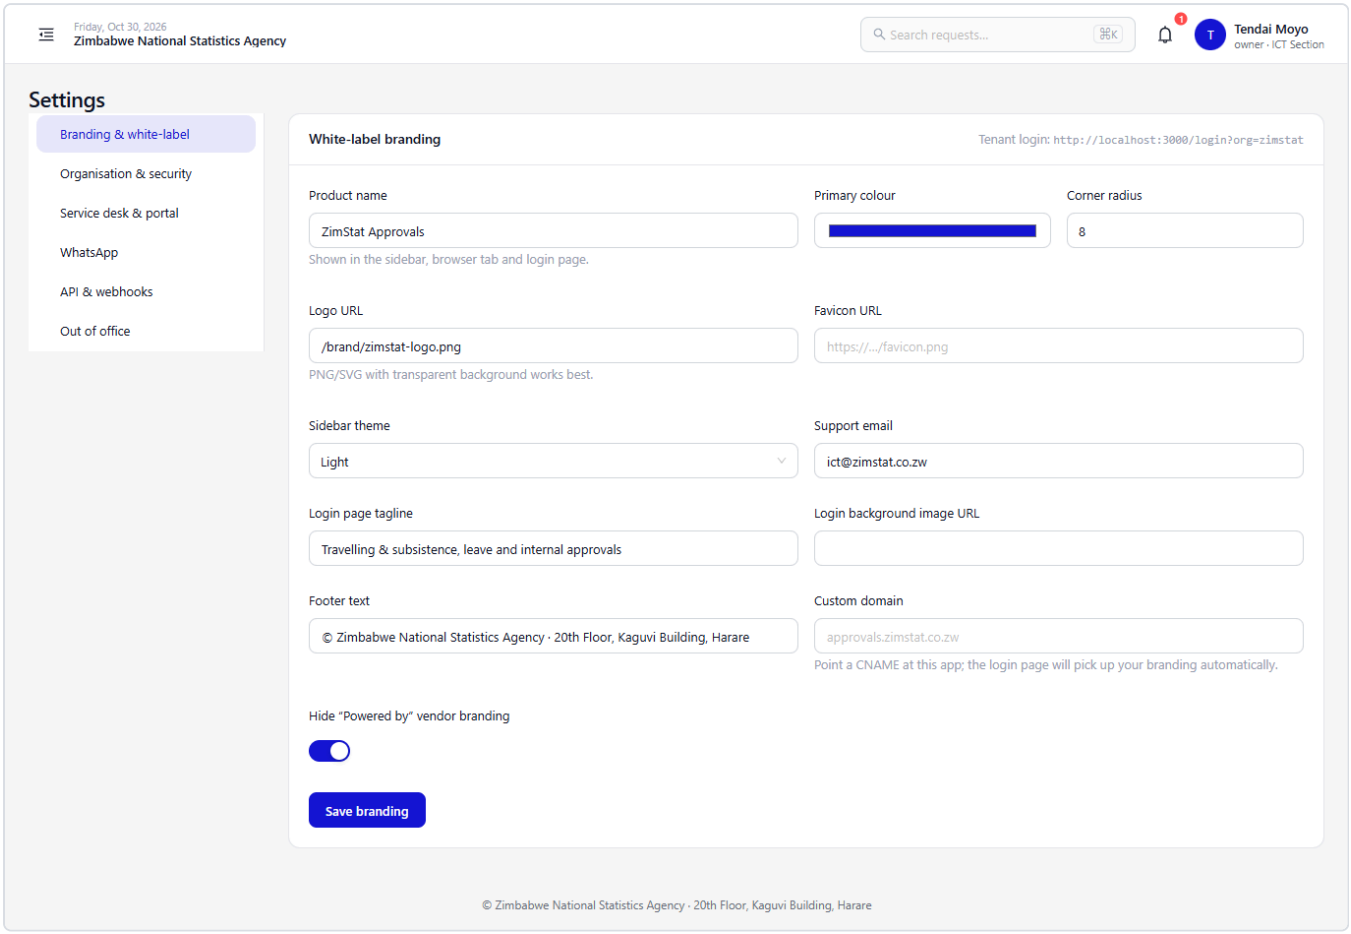

Fleet and trips

Fleet and trips

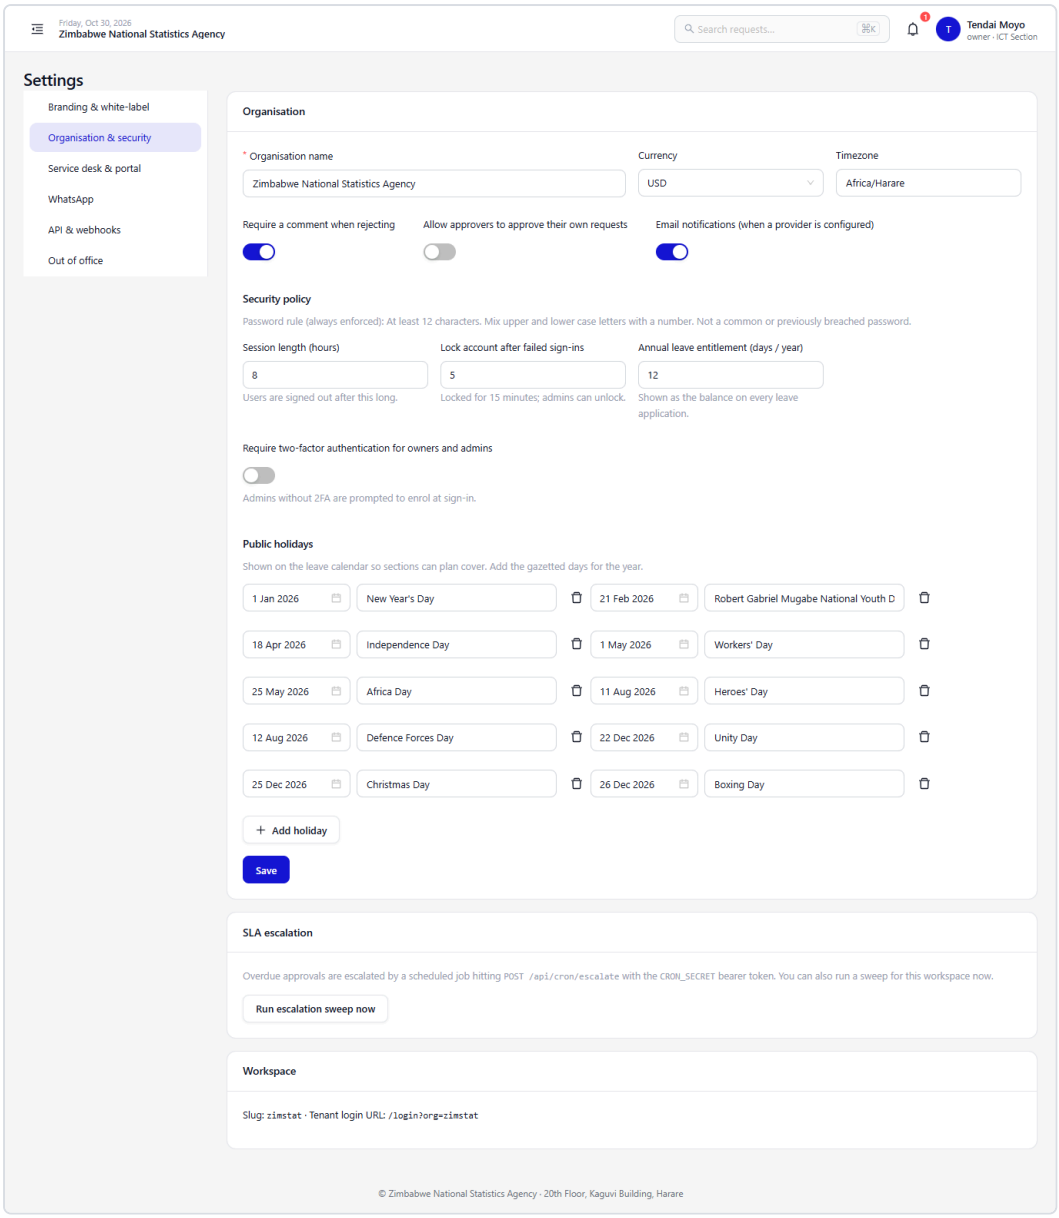

Officers book transport with the **Vehicle request** workflow (destination, dates, passengers, purpose). Once the Head of Section and Administration approve it, a trip appears on the Fleet page as *Needs vehicle* and the transport office is notified. The office **assigns** a vehicle and driver: vehicles already booked for the same dates, in maintenance or retired are not offered, and a driver cannot be on two trips at once. The driver or office **starts** the trip with the odometer reading and **completes** it with the closing reading and fuel drawn, which updates the vehicle's mileage. Each vehicle shows its status, odometer and next trip, and the office can book a trip directly for standing arrangements.

14. Settings (administrators)

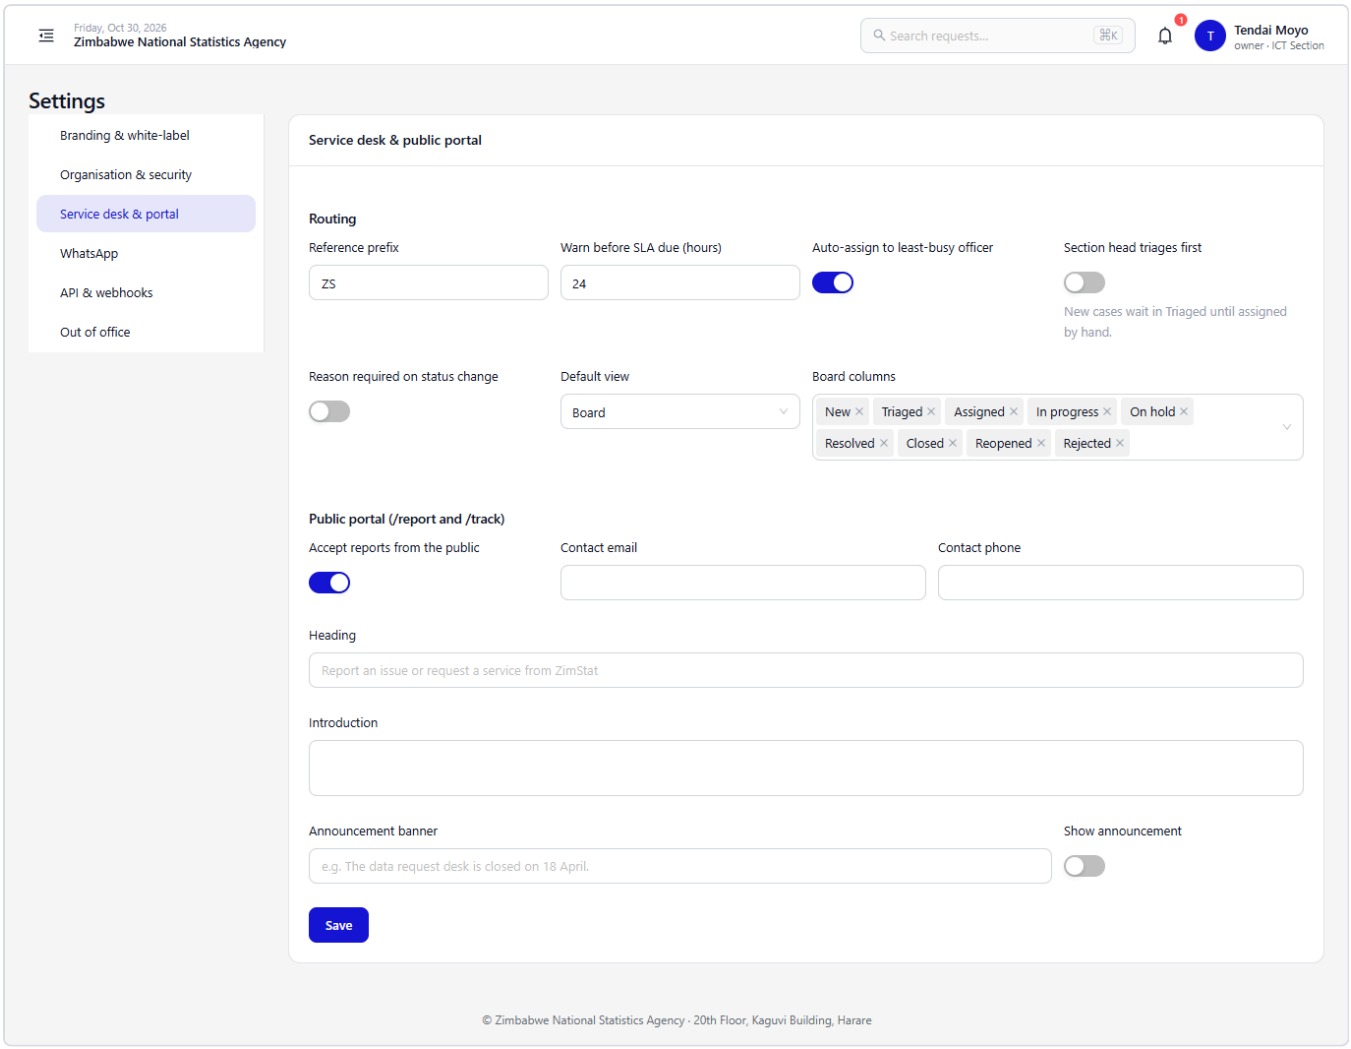

Branding

- **Branding**: product name, logo, colour and footer.
- **Organisation & security**: name, currency, timezone, password and session rules, lockout threshold, two-factor requirement for administrators, the **annual leave entitlement** (12 days by default) used for leave balances, and the **public holidays** shown on the leave calendar.

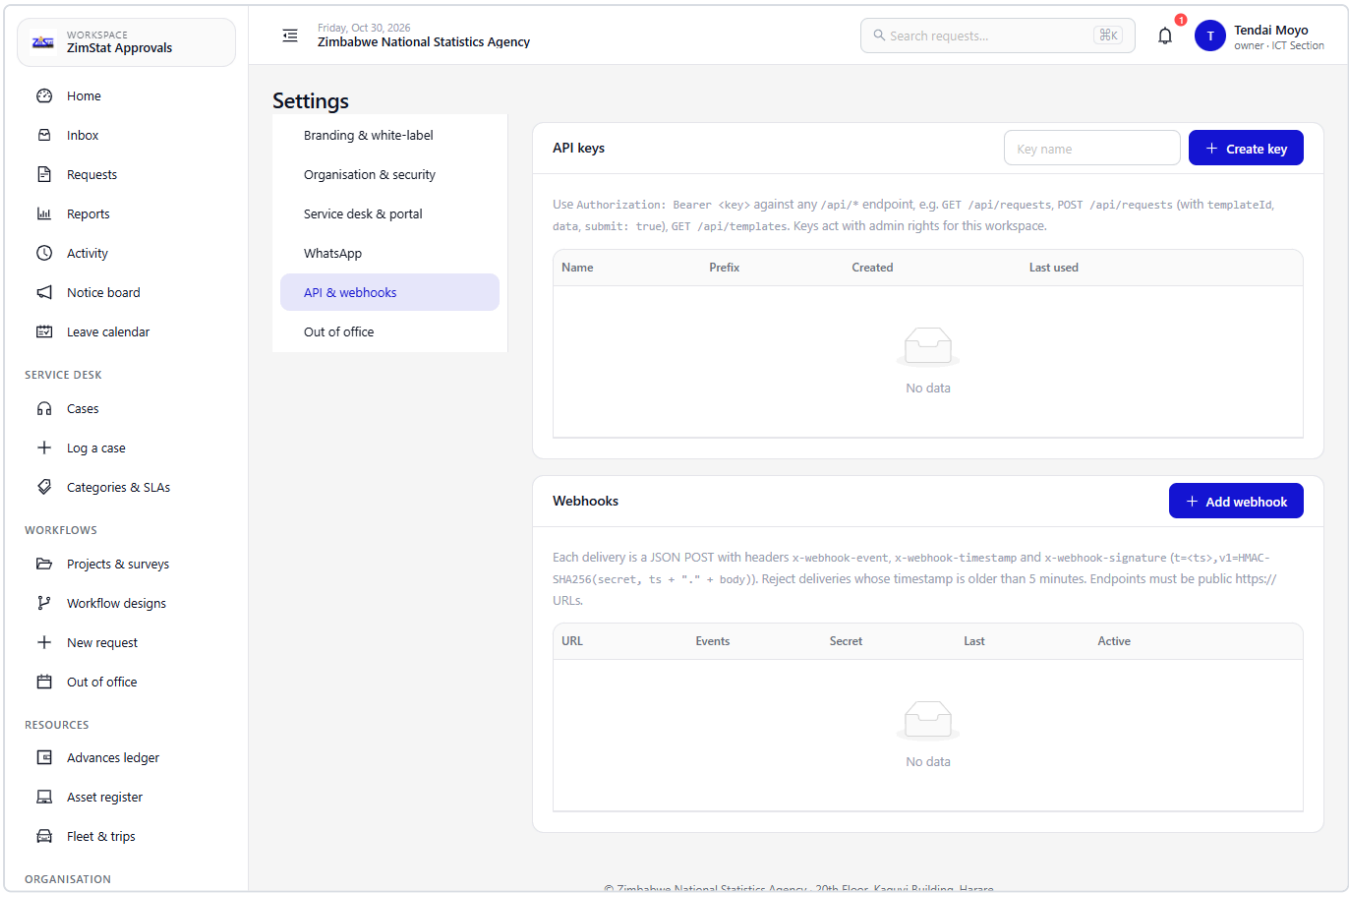

Organisation settings

- **Service desk & portal**: reference prefix, automatic assignment, triage-first, mandatory reasons, SLA warning window, board columns, and the public portal's heading, introduction, contact details and announcement banner.

Service desk settings

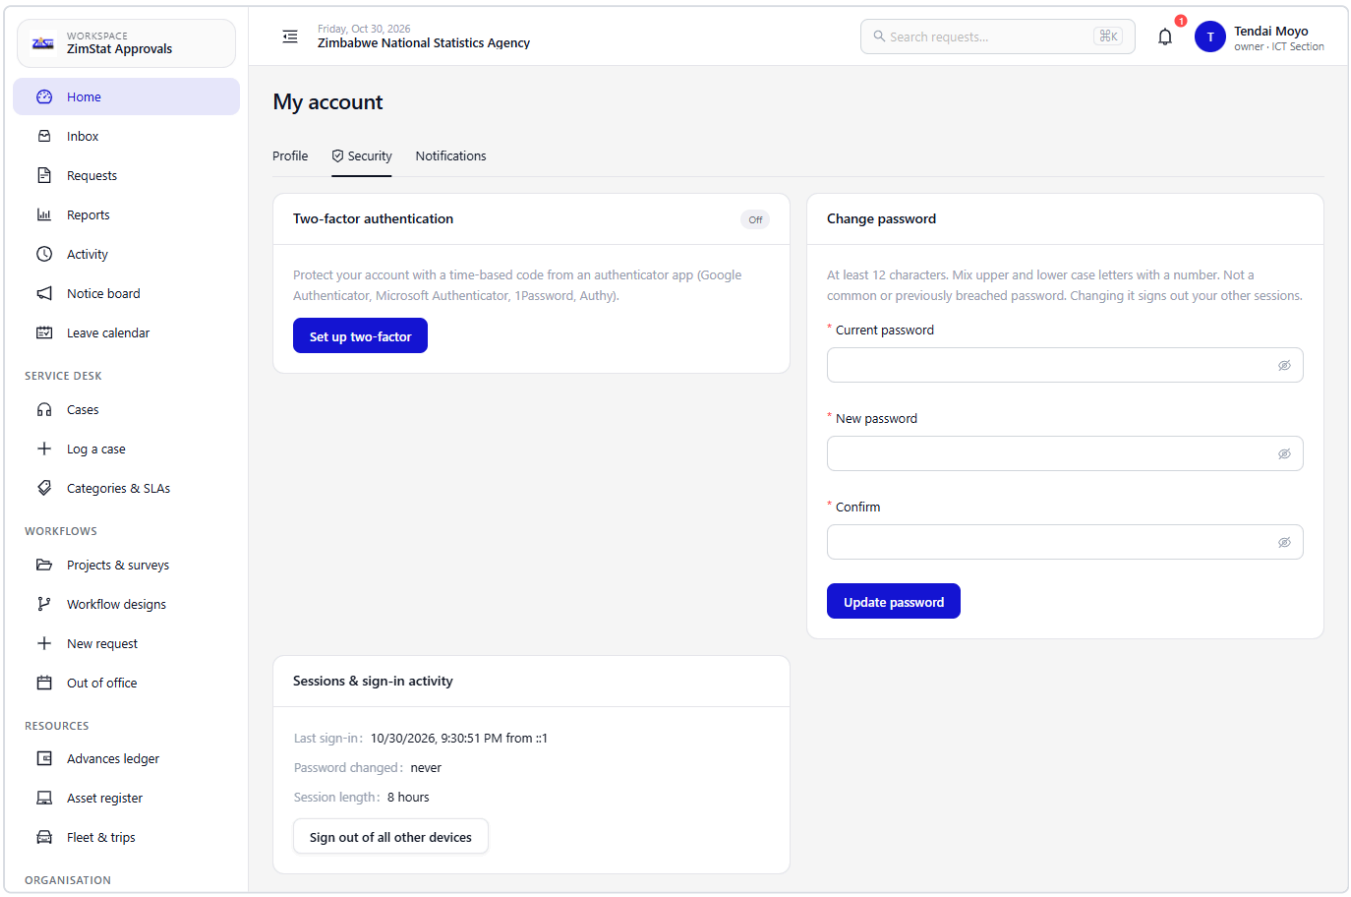

- **WhatsApp**: connection status, webhook address for Meta, template names, behaviour switches, test sends, the sandbox and the message log.
- **API & webhooks**: keys for integrations (for example a finance system pulling approved claims) and signed webhooks fired on request events.

API and webhooks

15. Your account

Open your profile from the avatar menu. Update your name, job title, phone and avatar. Under **Security** change your password, enable two-factor authentication with an authenticator app (you receive ten single-use backup codes), and sign out of all other devices. Under **Notifications** choose which events reach you in the app and by email.

Security settings

16. Troubleshooting

I cannot sign in. After five wrong attempts the account locks for 15 minutes; an administrator can unlock it from People. Use Forgot password? if needed.

I lost my phone and cannot get a two-factor code. Use a backup code. If you have none, an administrator can reset two-factor from People.

A request is not in my inbox but someone says it is waiting on me. Check the route on the request page. Your supervisor or section head may not be set correctly in People, or the level may name a section you are not in.

A case was assigned to the wrong person. Managers and administrators can reassign from the case panel; the change is recorded in the timeline. Check the category's section under Categories & SLAs.

The leave balance looks wrong. Only approved annual and vacation leave for the current year counts against the entitlement; sick, special and unpaid leave do not. The entitlement is set under Settings, Organisation.

Reporters are not receiving emails or WhatsApp messages. Email needs the SMTP settings on the server and WhatsApp needs the Meta connection; both are shown as configured or not under Settings. Messages that could not be delivered are listed in the outbox and WhatsApp log with the reason.

Glossary

Term	Meaning
Form / workflow design	The fields, route and rules a request follows
Level	One signature step in the route
Section approver	A level any officer in a named section may act on (Finance, Registry, Internal Audit)
Case	A service desk ticket, complaint or public request
SLA	Service target in hours for a level or a case category
Project	A survey, funder or cost centre that requests and cases are charged to
Delegation	Letting a colleague act for you, for one decision or for a period
Audit log	The unalterable record of every action

ZimStat Approvals user manual. Screenshots come from demonstration data.
